ENGIE BRASIL ENERGIA S.A.
A Publicly Listed Company – CNPJ 02.474.103/0001-19
NIRE 4230002438-4

ANNOUNCEMENT TO THE MARKET

ENGIE BRASIL ENERGIA S.A., a publicly listed company with its headquarters in the city of Florianópolis, state of Santa Catarina, at Rua Paschoal Apóstolo Pítsica, 5064, enrolled in the tax register (CNPJ) under number 02.474.103/0001-19 ("ENGIE" or "Company"), in compliance with the provision in CVM Resolution 44/2021 and in Instruction 480/2009, wishes to communicate to its investors and the market in general that it has signed with Vestas do Brasil Energia Eólica Ltda an agreement for the supply of up to 188 model V150 wind turbines with a power output of 4.5 MW each -, completing one of the stages which will allow work to start on the implementation of the Serra do Assuruá Wind Complex ("Serra do Assuruá" or "Project"). The agreement also provides for the transportation, assembly, installation, commissioning, and long-term maintenance of the turbines including replacement of the large components as well as up time guarantees.

Serra do Assuruá is located in the municipality of Gentio do Ouro, state of Bahia, approximately 200 km from the region where the Company already has the Umburanas, Campo Largo I and II wind complexes in operation. Comprising 24 wind farms to be implemented in a single phase, the Project has a concession grant issued by Aneel and a forecasted installed capacity of 846 MW, the estimated investment totaling approximately R$ 6 billion and about three thousand direct and indirect jobs will be created in the region.

Serra do Assuruá's entry into commercial operations is expected to take place gradually from the second half of 2024, total energy output being allocated to the Free Contracting Environment. The Project will also be able to sell into the energy self-production market.

Adding the installed capacity of Serra do Assuruá to the 434 MW of the Santo Agostinho Wind Complex, under construction in the state of Rio Grande do Norte, ENGIE Brasil Energia now has a total of approximately 1.3 GW of wind generation in the process of implementation. With the conclusion of both projects, the Company's generator park will have 2.5 GW of installed capacity in wind energy. "With these projects we shall recover, through the generation of renewable energy, the loss of installed capacity over the past 12 months due to the complete decarbonization of the Company's generator park. This reflects the commitment to our purpose of accelerating the energy transition towards a carbon neutral world", commented the Company's Chief Executive and Investor Relations Officer, Eduardo Sattamini.

The Company continues to have additional growth plans, maintaining 2.6 GW of renewable energy in the project portfolio at an advanced stage of development.

Florianópolis, September 30, 2022.

Eduardo Antonio Gori Sattamini
Chief Executive and
Investor Relations Officer
