ANNOUNCEMENT TO THE MARKET

Start on work for implementing the Asa Branca Transmission System

ENGIE BRASIL ENERGIA S.A. ("Company or ENGIE"), wishes to inform its investors and the market at large that it has begun work on the implementation of the Asa Branca Transmission System, transecting the states of Bahia, Minas Gerais and Espírito Santo, with approximately 1,000 km of transmission line as well as incorporating the expansion of five associated substations. The project is the result of a successful bid at the National Electric Energy Agency's (Aneel) transmission line auction in June 2023, with a contracted Annual Allowed Revenue (RAP) of R$ 268.4 million (baseline July/24).

Work has begun in the state of Bahia with the implementation of the section between the Morro Chapéu II and the Poções III substations, the installation license for which has been issued by Instituto do Meio Ambiente e Recursos Hídricos da Bahia - INEMA (*Institute of the Environment and Water Resources*). This section traverses 19 municipal districts and consists in the installation of a 334-kilometer long 500kV transmission line as well as the expansion of two associated substations. Work on this first stretch is expected to create approximately 2,000 direct jobs in the region and adhere to the strictest safety and sustainability criteria.

"*This landmark event not only demonstrates our efforts to bring forward the project's start-up ahead of the deadline set by the regulator, but also reflects our dedication to generating value for our shareholders. We believe that this initiative will provide an adequate return, in line with our strategy of sustainable growth and innovation in the energy sector*", commented Eduardo Takamori, Chief Financial and Investor Relations Officer.

"*Starting construction on schedule reflects the commitment of our teams, demonstrating our operational efficiency and ensuring that we honor our commitments, control costs, and satisfy our shareholders*. *ENGIE already operates more than 2.7 thousand kilometers of transmission line in Brazil together with six proprietary substations, through the Novo Estado (between the states of Pará and Tocantins), Gralha Azul (state of Paraná) and Gavião Real (state of Pará) Transmission Systems*", observes the Company's Chief Executive Officer, Eduardo Sattamini.

Florianópolis, October 16, 2024.
