ANNOUNCEMENT TO THE MARKET

ENGIE BRASIL ENERGIA BECOMES A COMPONENT OF THE S&P GLOBAL SUSTAINABILITY YEARBOOK FOR THE FIRST TIME AND ADVANCES TO AN A-RATING IN THE CDP

Recognitions mark evolution in aspects of the Company's ESG.

Florianópolis, February 7, 2024 - ENGIE BRASIL ENERGIA S.A. ("ENGIE" or the "Company") (B3: EGIE3, ADR: EGIEY) announces to the market at large that for the first time it has been included in the S&P Global Sustainability Yearbook 2024, in the Electric Utilities sector. Based on the scores from the Corporate Sustainability Assessment (CSA) 2023 questionnaire, the publication recognizes companies' commitment to sustainability and transparent communication.

This is the second year that the company has responded to the CSA, which is also used to define the companies comprising the Dow Jones Sustainability Index portfolio. In 2023, we achieved 77 points out of a possible 100, a significant improvement when compared to the result of the first year of evaluation, when we reached 61 points.

Of the 9,316 companies that responded to the CSA in the cycle, only 759, from 61 industrial sectors, are included in the yearbook. Of the 199 companies in the global electricity sector assessed, 24 are included in the Yearbook.

"Being prepared to meet the growing demand for transparency from financial institutions, customers and society in general is one of our challenges. The evolution of our CSA score and having our corporate sustainability recognized by a renowned global institution such as S&P, shows that we are on the right track. We will continue to act with the purpose of accelerating the transition to a carbon-neutral economy, with our strategy guided by ESG guidelines," said Eduardo Sattamini, the Company's CEO.

Evolution in the CDP Climate Change evaluation

ENGIE Brasil Energia has also advanced to an A- (A minus) rating in the CDP Climate Change 2023. This is the second year that the Company has reported individually - and no longer with information consolidated with the Parent Company - to the CDP Disclosure Insight Action, formerly known as the Carbon Disclosure Project. In the first year, the rating received was B.

CDP is a global non-profit organization that manages the world's leading environmental disclosure platform. Since 2018, the CDP's Climate Change questionnaire has been aligned with the recommendations of the Task Force on Climate-related Financial Disclosures (TCFD) and assesses, among its categories, information on governance, strategy, risk and opportunity management, reduction of greenhouse gas emissions and metrics and targets related to the topic.

"Commitment to meaningful and measurable environmental action is more critical than ever. Providing transparency as to our climate performance and commitments is essential for the building of trusting relationships with our investors and helps them manage corporate risk. In addition, answering questionnaires such as CDP Climate is important for us to have the support to guarantee our journey of continuous improvement on environmental issues," said Eduardo Takamori Guiyotoku, Chief Financial and Investor Relations Officer at ENGIE Brasil Energia.

In 2023, a record of more than 23,000 companies - representing at least two-thirds of the global market capitalization - disclosed environmental information through CDP - 24% more than last year and 140% higher than the disclosures in 2020.
