INSTITUTIONAL PRESENTATION 3Q26

November **2026**

ENGIE Brasil Energia S.A.

Disclaimer

This publication may include forward-looking statements on events or results pursuant to Brazilian and international securities' regulations. These forward-looking statements are based on certain assumptions and analyzes made by **ENGIE Brasil Energia S.A.** ("ENGIE Brasil Energia" or "Company"), in accordance with its experience and the economic scenario, market conditions and expected events, many of which are outside the control of **ENGIE Brasil Energia**. Important factors which can lead to significant differences between effective results and the forward-looking statements with respect to events or results, include the business strategy of **ENGIE Brasil Energia**, economic and international conditions, technology, financial strategy, development of the government services industry, hydrological conditions, conditions in the financial markets, uncertainty surrounding the results of its future operations, plans, objectives, expectations and intentions and other factors. In the light of these factors, the effective results of **ENGIE Brasil Energia** may differ significantly from those indicated or implicit in the forward-looking statements with respect to events or results.

The information and opinions contained herein should not be understood as a recommendation to potential investors and no investment decision should be based on the veracity, topicality or completeness of this information or these opinions. None of the advisors **to ENGIE Brasil Energia** or the parties related thereto, or their representatives shall accept responsibility for any losses, which may occur as a result of the use or the content in this presentation.

This material includes forward-looking statements as to events subject to risks and uncertainties, which based on existing expectations and forecasts on future events and tendencies, may affect the businesses of **ENGIE Brasil Energia.**

These forward-looking statements include forecasts of economic growth and energy supply and demand as well as information on competitive position, the regulatory environment, growth potential opportunities and other matters. Innumerous factors can affect adversely the estimates and assumptions on which these statements are based.

HIGHLIGHTS

Highlights

Following approval by the Shareholders' Meeting, on July 17 the **transfer of the 40% equity interest in Jirau Energia**, held by ENGIE Brasil Participações, to the Company, was completed with **recognition under the equity method** of accounting commencing as of that date.

On July 20, the Company **completed the financial settlement of the renegotiation of the Public Asset Use (UBP),** related to the future obligations of the Cana Brava and Ponte de Pedra Hydroelectric Power Plants (HPPs), with a total payment of R$ 2.23 billion.

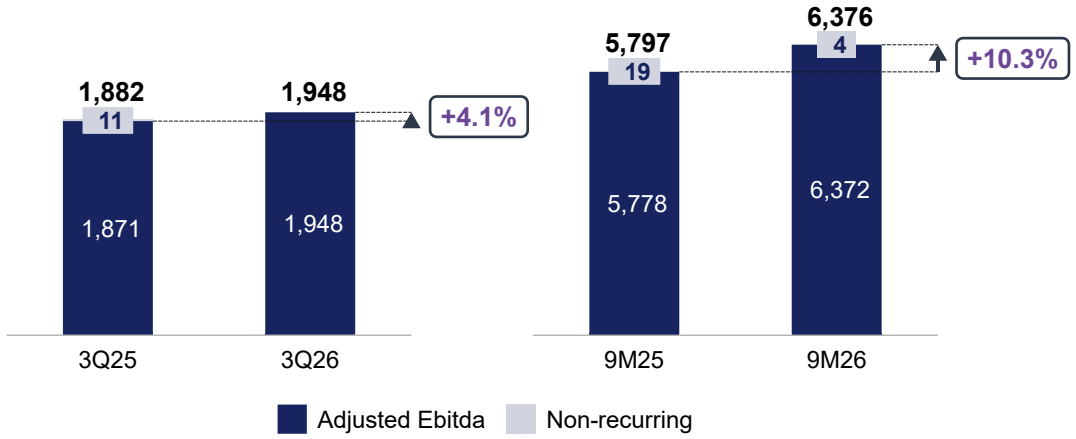

Fitch Ratings **upgraded** the Company's **Long-Term Local Currency Issuer Default Rating (IDR)** to **'BBB'**, with a stable outlook. All other ratings assigned to the Company were affirmed.

On November 5, the Board of Directors approved the convening of an Extraordinary Shareholders' Meeting (ESM) to deliberate on the **merger of the Company's wholly owned subsidiary, ENGIE Brasil Energia Comercializadora (EBC),** into the Company, with the objective of simplifying the organization's corporate structure.

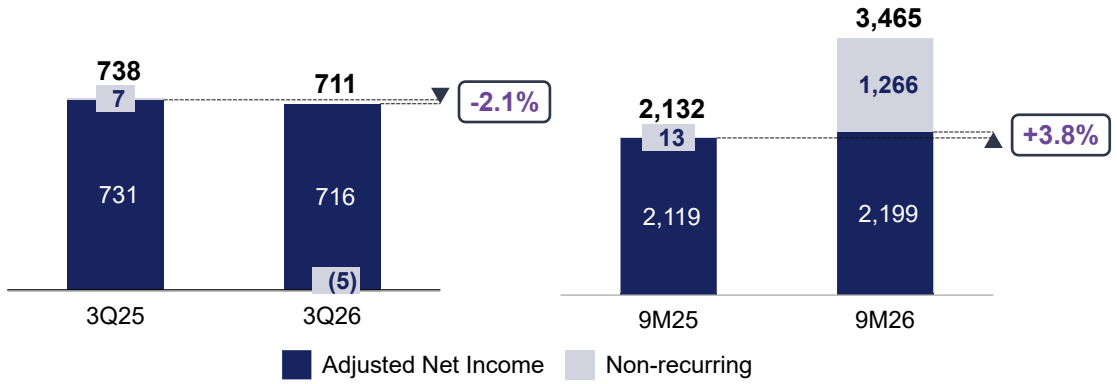

Transparency Trophy (16th award) – ANEFAC: recognizes excellence in corporate governance, transparency, and the quality of financial reporting and disclosures.

Highlights

| Adjusted Ebitda[1] (R$ million)

| Adjusted Net Income (R$ million)

Main drivers of the result vs. 3Q25

Generation Segment

↑ R$ 124 million

Transmission Segment

↓ R$ 25 million

Result of Equity Income (TAG)

↓ R$ 22 million

Depreciation and amortization

↓ R$ 70 million

Financial Result

↓ R$ 42 million

Income Taxes

↑ R$ 20 million

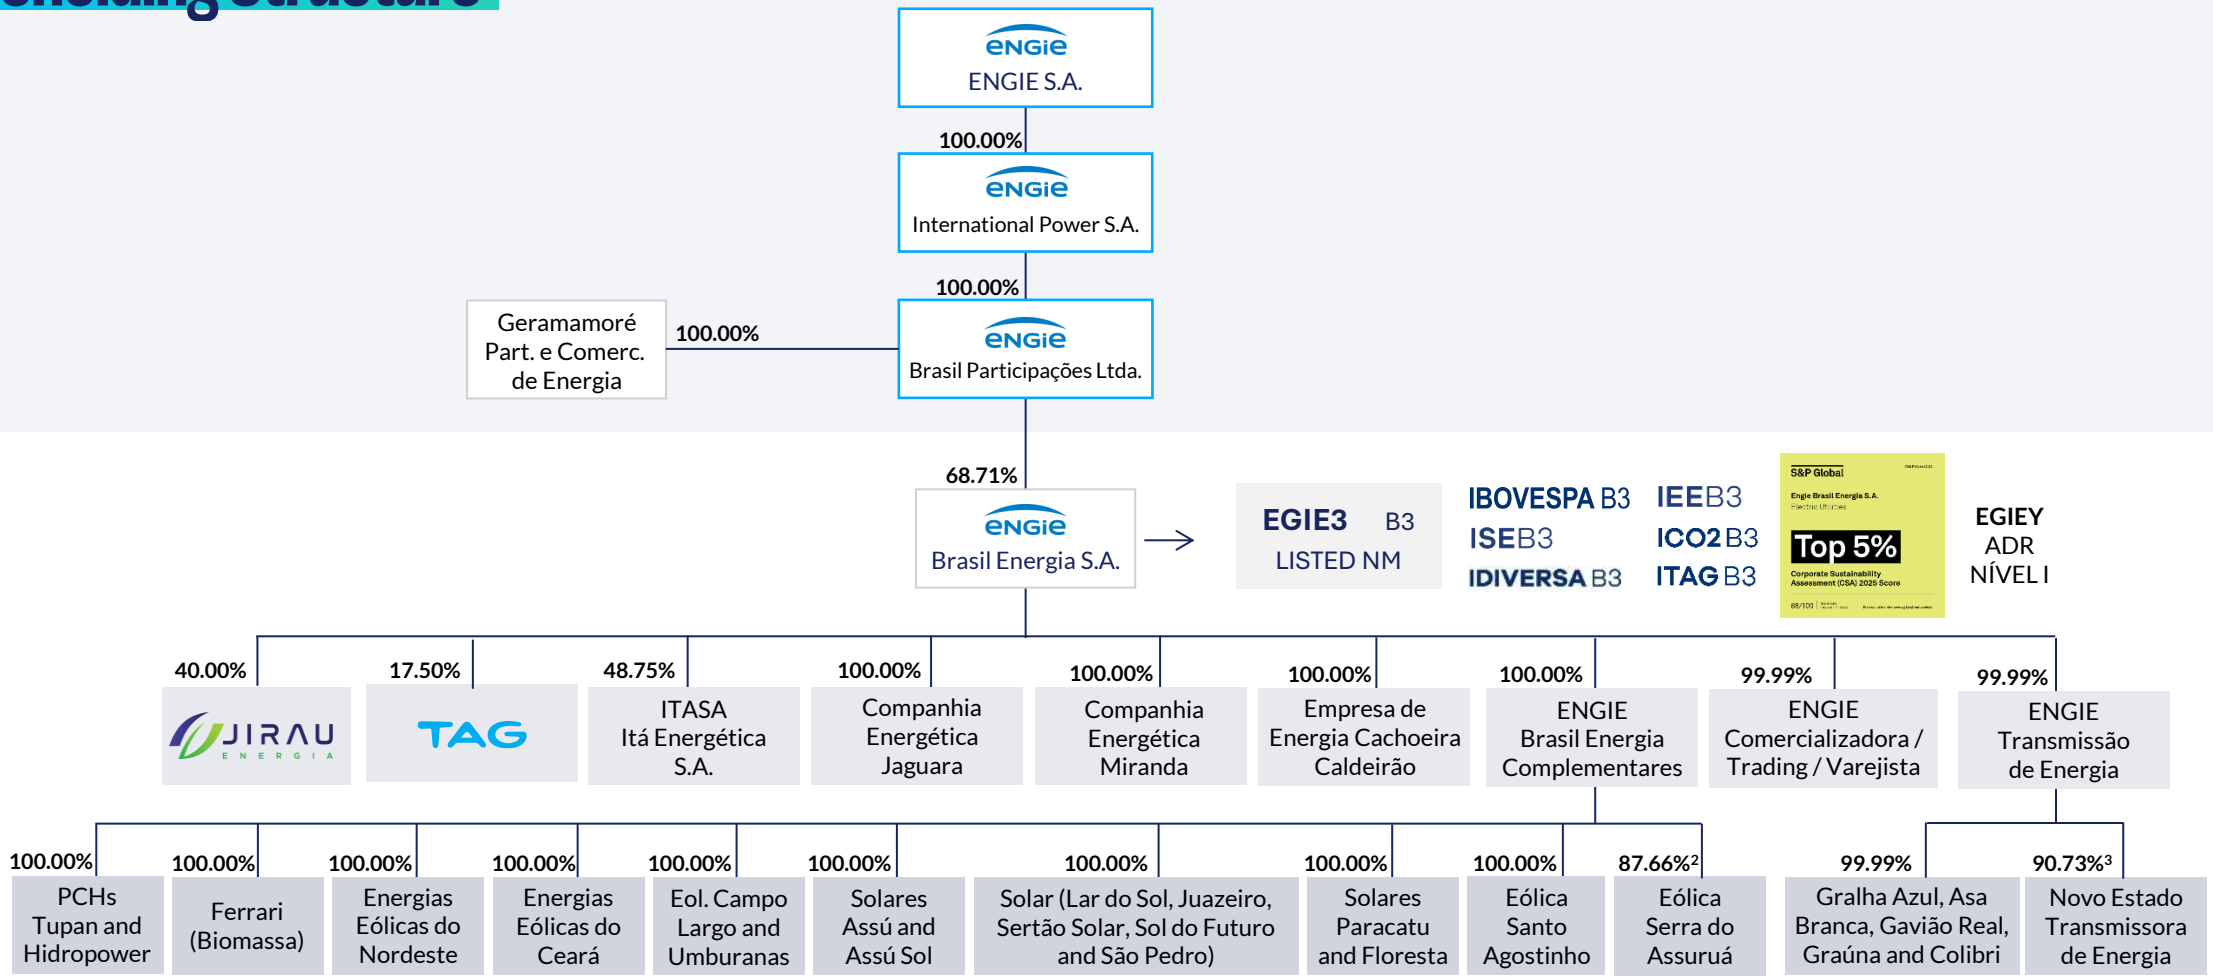

Note: [1]Adjusted Ebitda: net income + income tax and social contribution + financial result + depreciation and amortization + non-recurring.

02.

SHAREHOLDING STRUCTURE AND BUSINESS SEGMENTS

Shareholding Structure[1]

Notes:
[1] Simplified chart for illustrative purpose only.
[2] Considering the indirect stake of ENGIE Brasil Energia, through Maracanã Geração de Energia e Participações S.A.
[3] Considering the indirect stake of ENGIE Brasil Energia, through Novo Estado Participações S.A., for accounting purposes, redeemable preferred shares are stated as financial liabilities. For more details, see Explanatory Note 14 - Debt Instruments of the financial statement.

Balanced Portfolio of Business in Energy Infrastructure

Generation

146 power plants with installed capacity of **12.8 GW,** considering the 40% stake (1.5 GW) held in Jirau HPP

Transmission

3,205 Km of transmission lines under operation and **6** own **substations**
+~1,547 km under implementation

Trading

346 GWh in 3Q26, **3.1%** of the total generation segment

Gas Transportation (TAG)

~4,600 Km of pipelines in the Southeast, Northeast and North regions.
Stake of 17.5%

Installed Capacity*

67% Hydro

33% Complementary

*Including the 40% stake in the Jirau HPP

Energy Generation

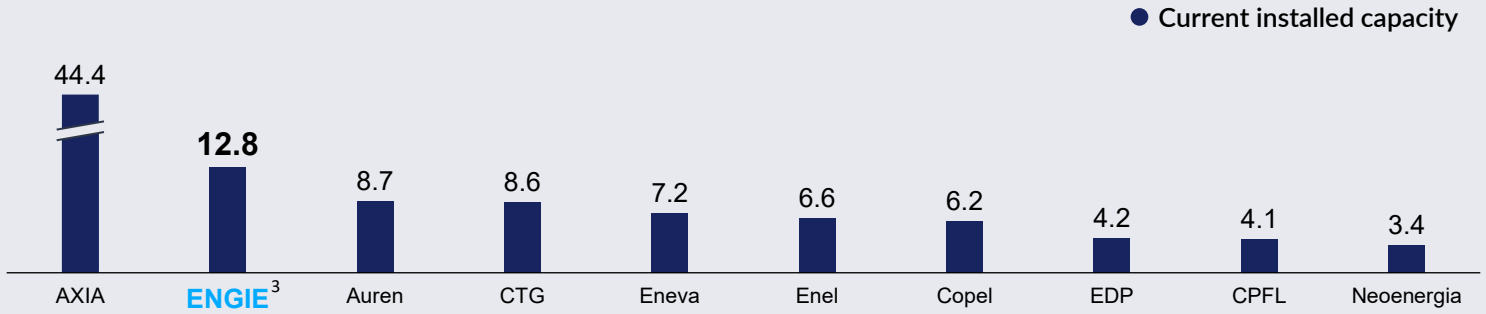

Relevance among power producers

The Company is one of the largest private groups in the segment in Brazil and is positioned to capture business opportunities.

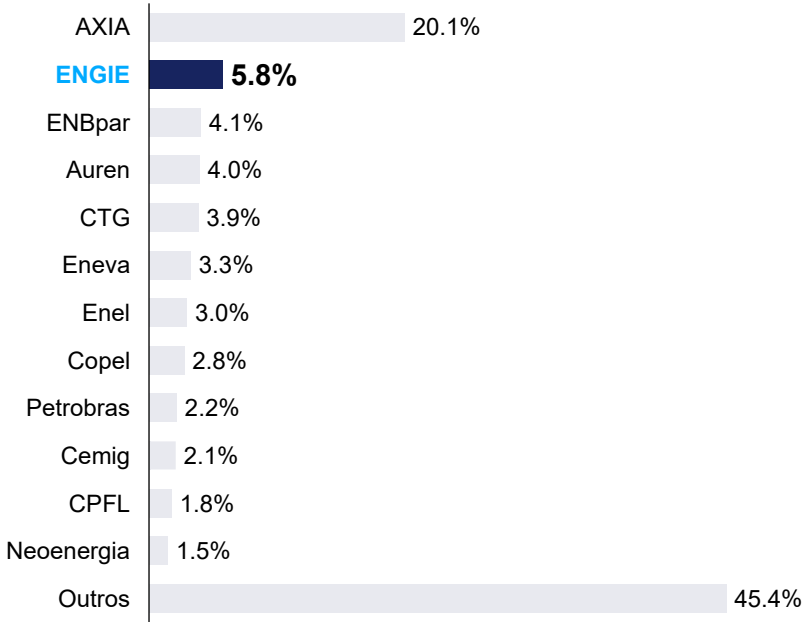

| Operating installed capacity (GW)

| Private sector – installed capacity (GW)

| Brazil – existing installed capacity[1,2]

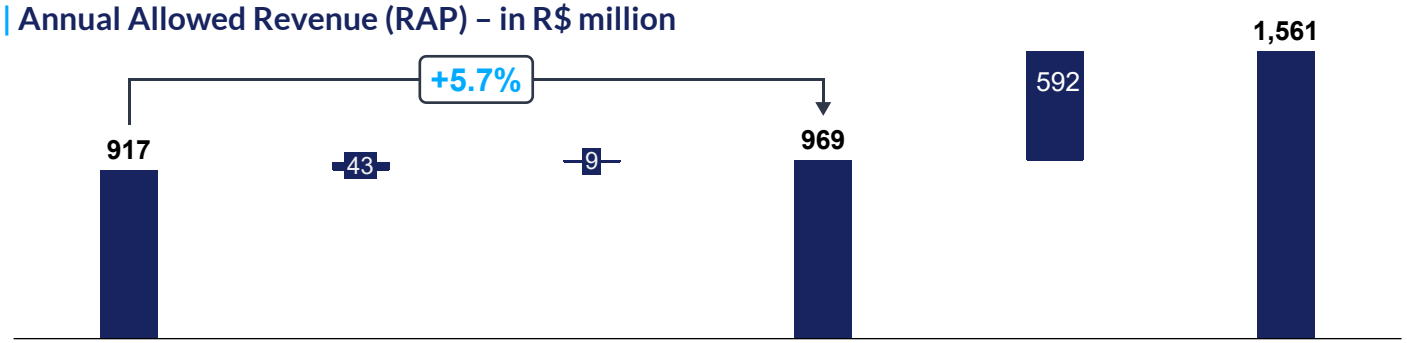

Source: Aneel, Companies' websites and in-house studies.
Notes:
[1] Amount corresponding to National Interlinked System (SIN), considering the Operation Monthly Program (PMO) as of September 2026.
[2] Includes only the Brazilian part of Itaipu.
[3] Considering the 40% stake held in Jirau HPP as from July 17, 2026.

Energy Transmission

Expanding presence in the segment

Transmission System	Line Length (Km)	Substation/Condensers	Total RAP[1] (R$ million)	% RAP under operation
1 Gralha Azul	909	5 own and expansion of 5 existing ones	365.3	100%
2 Novo Estado	1,800	1 own and expansion of 3 existing ones	484.9	100%
3 Gavião Real	-	New patio in 1 existing	8.2	100%
4 Asa Branca	334 in operation 666 under construction	Expansion of 2 related ones	296.0	32,3%
5 Graúna	162 in operation 738 under construction	2 related substations 2 new substations	281.0	5%
6 Colibri	143 km under construction	5 synchronous condensers	122.8	-

Annual Allowed Revenue (RAP) – in R$ million

Concessions under **full operation** and partial Asa Branca and Graúna

Gralha Azul reinforcement

Projects under implementation Asa Branca, Graúna, Colibri and reinforcements

3,205 Km
Commercial operation

1,547 Km
Under implementation

Note: [1] Value as of June 2026 (cycle 2026-2027), net of PIS and Cofins.

Gas Transportation

Transportadora Associada de Gás (TAG)

Stake in TAG strengthens the position as a relevant player in the Brazilian energy infrastructure

Characteristics

Most extensive network of gas pipelines:
3,825 km on the coast
800 km in the Amazon region

Presence in **10 Brazilian states** and about **200 municipalities**

Network points:

- **14 gas entry** points, including 2 LNG terminals (+1 under development)
- **92 delivery** points (+6 under development)
- **2 bidirectional** points
- **1 interconnection** point

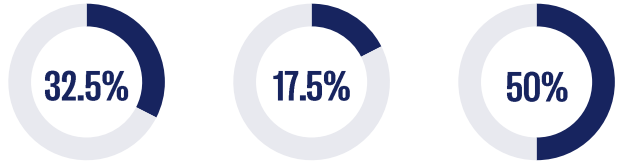

Connection:

- **10 gas distributors**
- **2 refineries**
- **20 thermal power plants**
- **2 fertilizer plants**

Shareholding Structure

TAG

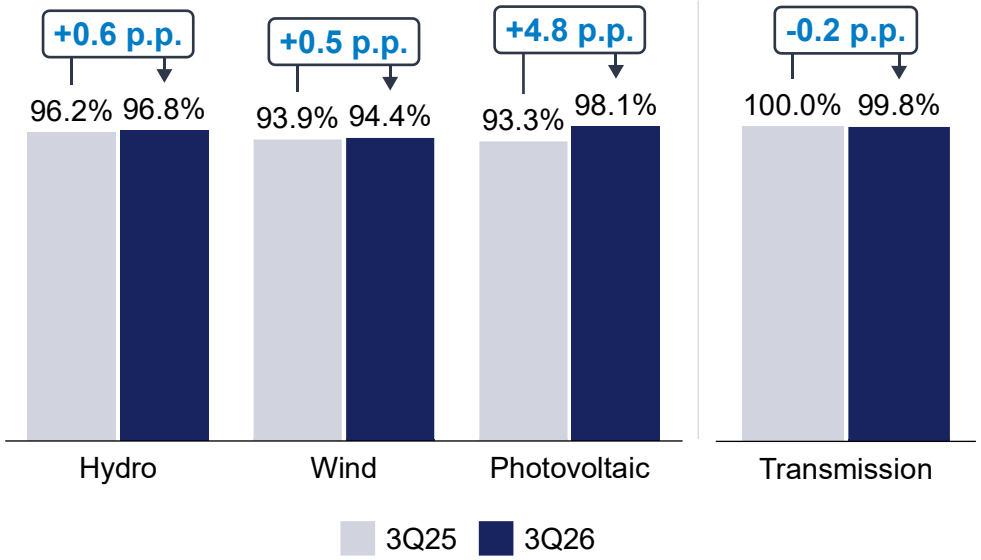

03.

OPERATING HIGHLIGHTS

Generating and Transmission Uptime

Operational excellence in generation and transmission assets

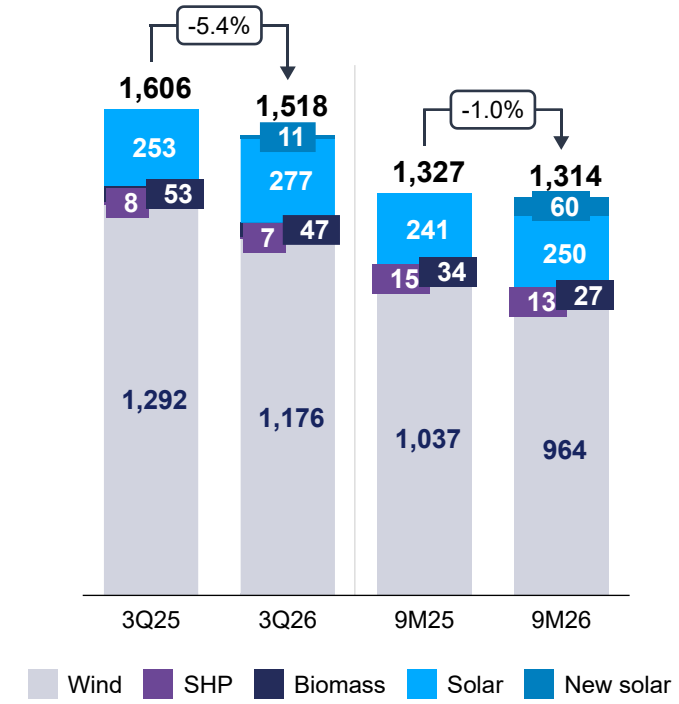

Note: Uptime includes both schedule and forced stoppages.

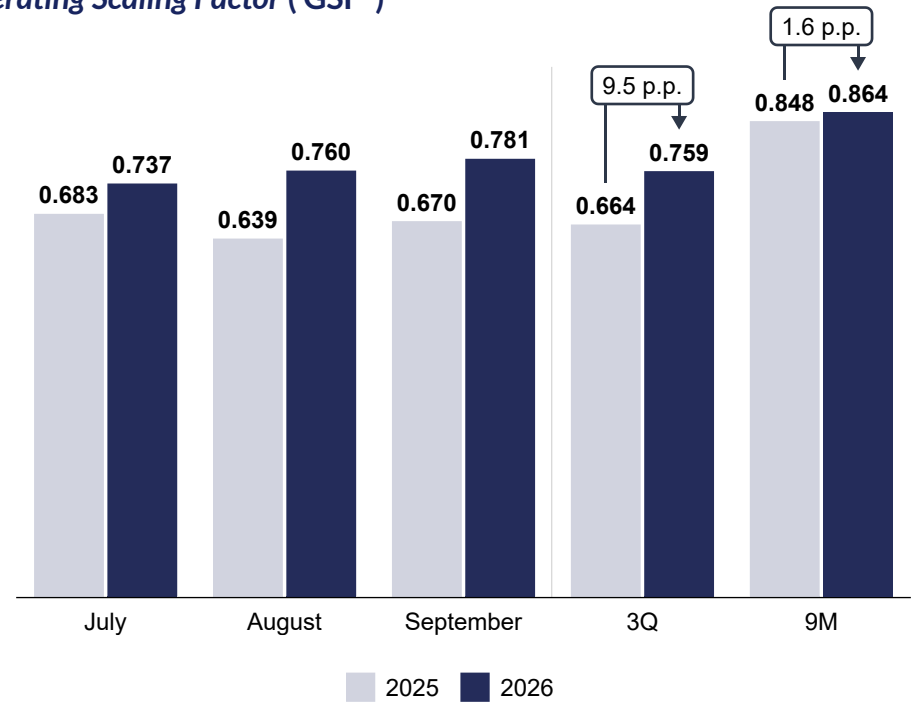

Energy Generation

Increase in solar generation driven by organic growth
Hydro generation from MRE higher than 3Q25, measured by GSF'[1]

| Generation by Complementary Source (avg MW)

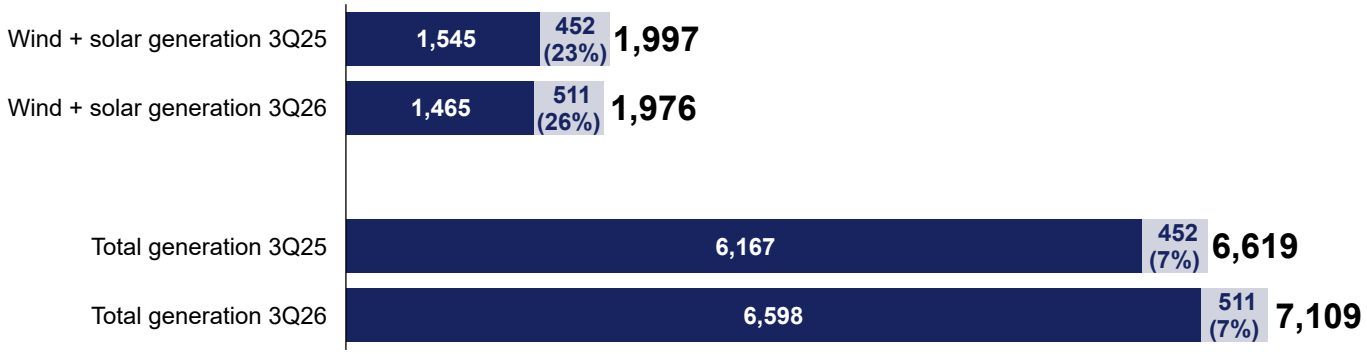

| *Generating Scaling Factor (GSF')*

Note:
[1]GSF': without the effects of seasonality of the agents.

Energy Generation: Curtailment

| % of Curtailment over Generation (avg MW)

| % of Curtailment* by source

	3Q25			3Q26		
	Wind	**Solar**	**Total**	**Wind**	**Solar**	**Total**
ENGIE	19%	37%	**23%**	22%	36%	**26%**
SIN	20%	37%	**23%**	24%	31%	**26%**

Source: ENGIE Brasil Energia internal study based on premises disclosed by ONS and subject to updates.

3Q26 curtailment **in line with SIN.**

Curtailment compensation:
(MME Ordinance No. 140/2026, published on July 21, 2026)

Eligible period:
September 1, 2023 to November 25, 2025;

Compensation: external unavailability and electrical reliability;

- ✓ Execution of the commitment agreement: entered in August 2026, with no accounting entry recognized to date.
- ✓ The amounts to be reimbursed are expected to be determined between the 1st and 2nd quarters of 2027.

04.

SALES AND ENERGY TRADING STRATEGY

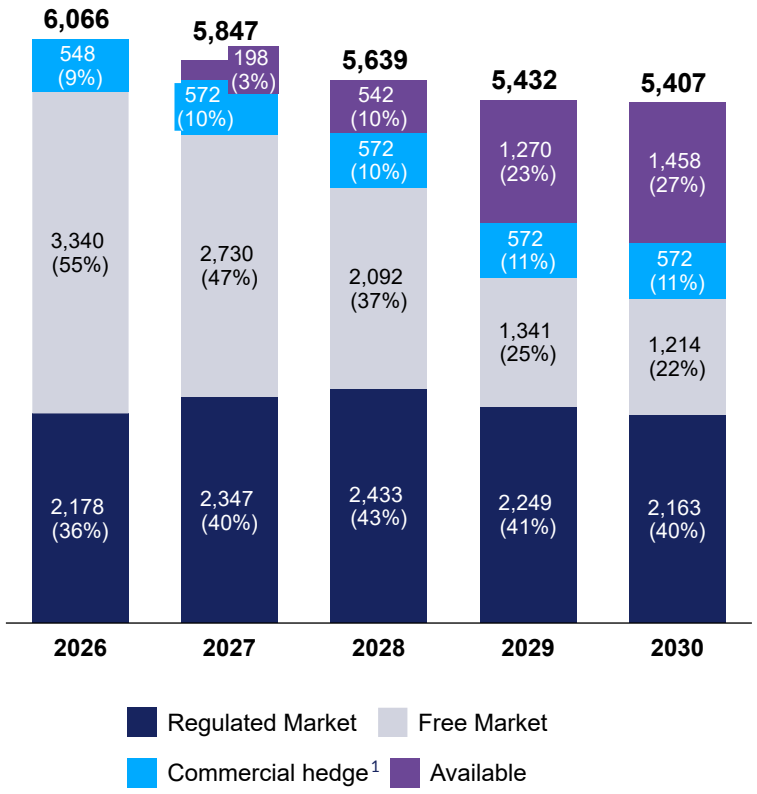

Energy Commercial Strategy

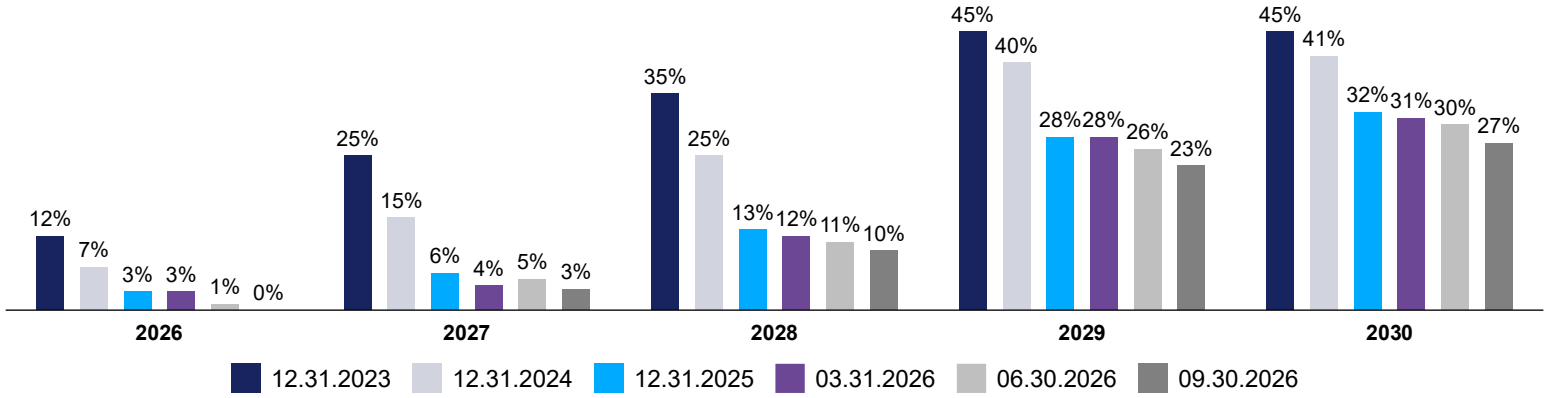

Gradual sale of energy, with hedge preservation for portfolio risk protection

| Energy Balance (% of total; in avg MW)

as of September 30, 2026

| Uncontracted energy compared to the availability of a given period

Evolution of the number of free customers and consumer units

3,012
(+46.5% compared to 3Q25)
Number of free consumers in 3Q26[1]

4,781
(+4.2% compared to 3Q25)
Consumer Units served in 3Q26[2]

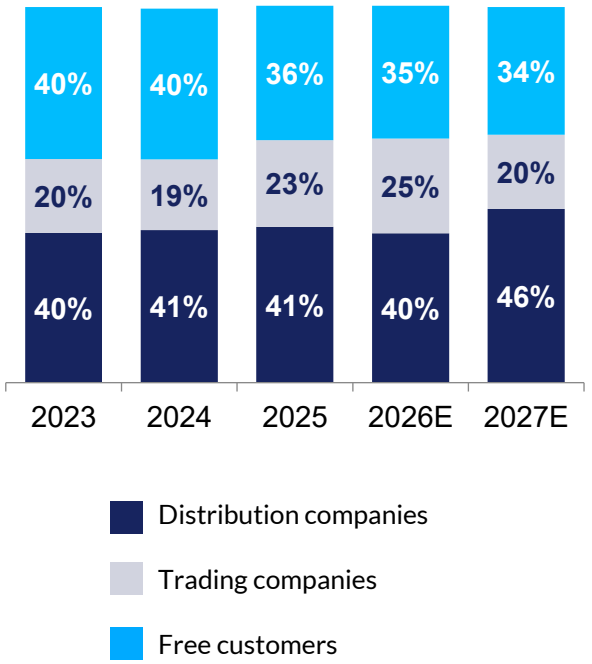

Notes:
[1] Indicative commercial hedge, subject to fluctuation depending on market conditions.
[2] Considers all consumer units with active contracts.

Balanced Portfolio

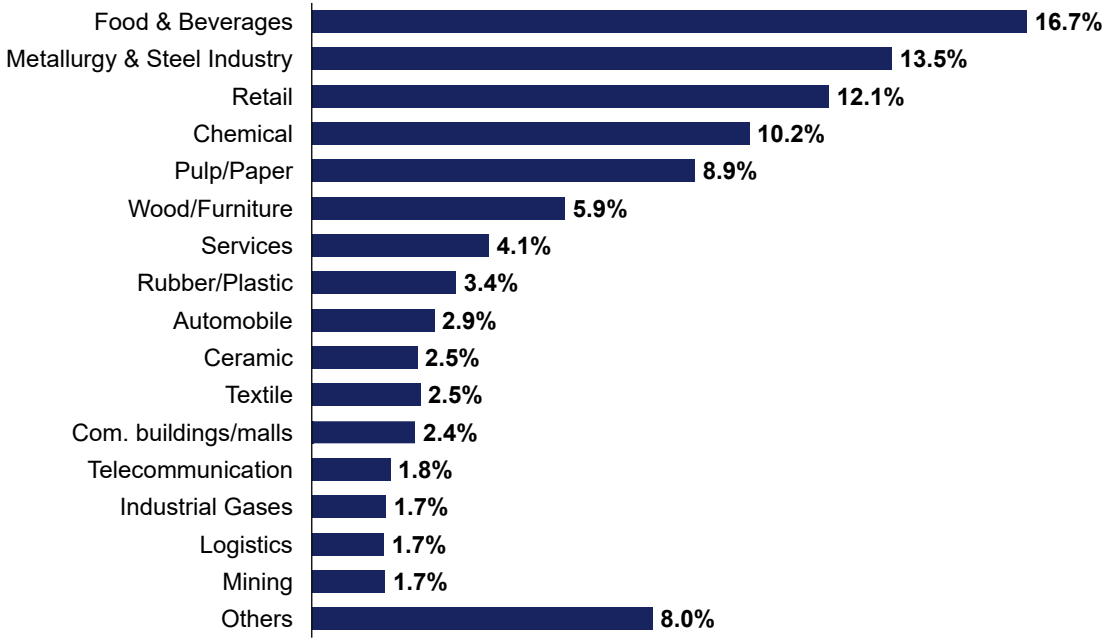

Portfolio diversification among distribution, free customers and trading companies

Energy contracted by client

Free customers total sales volume for 2026

Source: ENGIE Brasil Energia's internal study based on IBGE's classifications.

05.

EXPANSION

Jaguara HPP Expansion: Capacity Reserve Auction

Value generation in a hydropower asset with regulated revenue

Expansion of Jaguara HPP aligned with the Company's strategy to invest in high-performance assets with 100% clean energy.

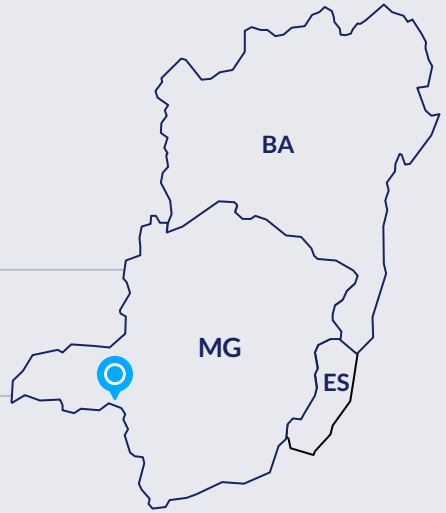

Commencement of activities related to field studies and environmental permitting for construction and installation areas.

Auction features

Power capacity contracted (MW)	195.78 MW
Contract term	15 years
Beginning of operation	August 2030
Annual fixed revenue	R$ 270.4 million[1]
Estimated Capex	R$ 1.2 billion[2]

Jaguara HPP (MG)

Current installed capacity:
424 MW

Commercial capacity:
324 MW

Concession period:
June 2048

Increase of installed capacity:
+232 MW (2 turbines of 116 MW)

Technical features:

- 70% of commercial capacity under quota regime (ACR), free of GSF.
- 30% of commercial capacity directed to the Free Contracting Environment (ACL).

Notes:
[1] Baseline: September 2025 (annual adjustment in August based on the IPCA index).
[2] Baseline: March 2026.

Transmission Projects Under Implementation

Asa Branca Transmissora de Energia (BA, MG, ES)

Contracted RAP[1]:
R$ 296.0 million

Capex Aneel[2]:
R$ 2,667 million

Concession period:
30 years

Deadline to start operation:
March 2029 (66 months)

Key technical features:

- estimated length of 1,000 Km;
- 4 transmission lines of 500 kV single-circuit, crossing 60 municipalities in the states of BA, MG and ES.

Notes:
[1] Value as of June/26.
[2] Value as of December/22.

LT 500kV Morro do Chapéu II – Poções III section (BA), with 334 kilometers of length was energized on **November 26, 2025**, representing **32.3% of total RAP.**

In 3Q26, tower erection activities on the transmission lines and installation of substation equipment were underway.

Graúna Transmissora de Energia (SC, PR, SP, MG, ES)

Contracted RAP[1]:
R$ 281.0 million

Capex Aneel[2]:
R$ 2,933.6 million

Concession period :
30 years

Deadline to start operation:
December 2029 (60 months)

Key technical features:

- construction of ~738 km length (6 new transmission lines) and 2 new substations;
- brownfield section: operation of 4 existing lines (162 km) and 2 own substations
- 47 municipalities.

Notes:
[1] Valor as of June/26.
[2] Valor as of December/22.

In 3Q26, the Installation License was obtained for the section under the environmental licensing authority of the State of MG, as well as for the substations in the State of SC.

Mobilization orders were issued for the Abdon Batista 2 and Curitiba Oeste substations, and construction works progressed along the section between MG and SP.

Transmission Projects Under Implementation

Colibri A, B, C, D Transmissora de Energia (RN, CE)

Contracted RAP[1]:
R$ 104.7 million

Capex Aneel[1]:
R$ 1.4 billion

Concession period:
30 years

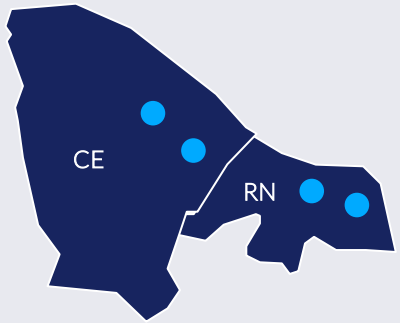

Deadline to start operation:
December 2029 (42 months)

- In 3Q26, environmental studies and permitting processes continued to progress;
- basic and detailed engineering design underway;
- preliminary drilling and topographic surveying activities were initiated.

Key technical features:

- Sublots 3A–3B–3C–3D: installation of five synchronous condensers.

3A (RN): 1 synchronous condenser
3B (CE): 1 synchronous condenser
3C (CE): 2 synchronous condensers
3D (RN): 1 synchronous condenser

Colibri A, B, C, D

Note:
[1] Value as of August/25.

Colibri Sul Transmissora de Energia (SC, PR)

Contracted RAP[1]:
R$ 18.1 million

Capex Aneel[1]:
R$ 193.6 million

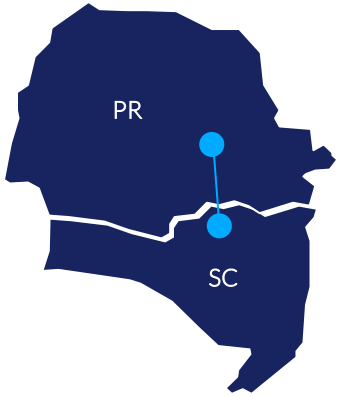

Concession period:
30 years

Deadline to start operation:
December 2029 (42 months)

- In 3Q26, the application for the Preliminary License (LP) was filed with the competent authority;
- the main supply and construction agreements were executed;
- preliminary drilling and topographic surveys activities were initiated.

Key technical features:

- Construction of one 230 kV transmission line, with approximately 143 km length, in the states of SC and PR.
- Sinergy: The transmission line connects to the Ponta Grossa Substation (Gralha Azul).

Colibri Sul

Note:
[1] Value as of August/25.

Expansion

Projects under construction

Transmission

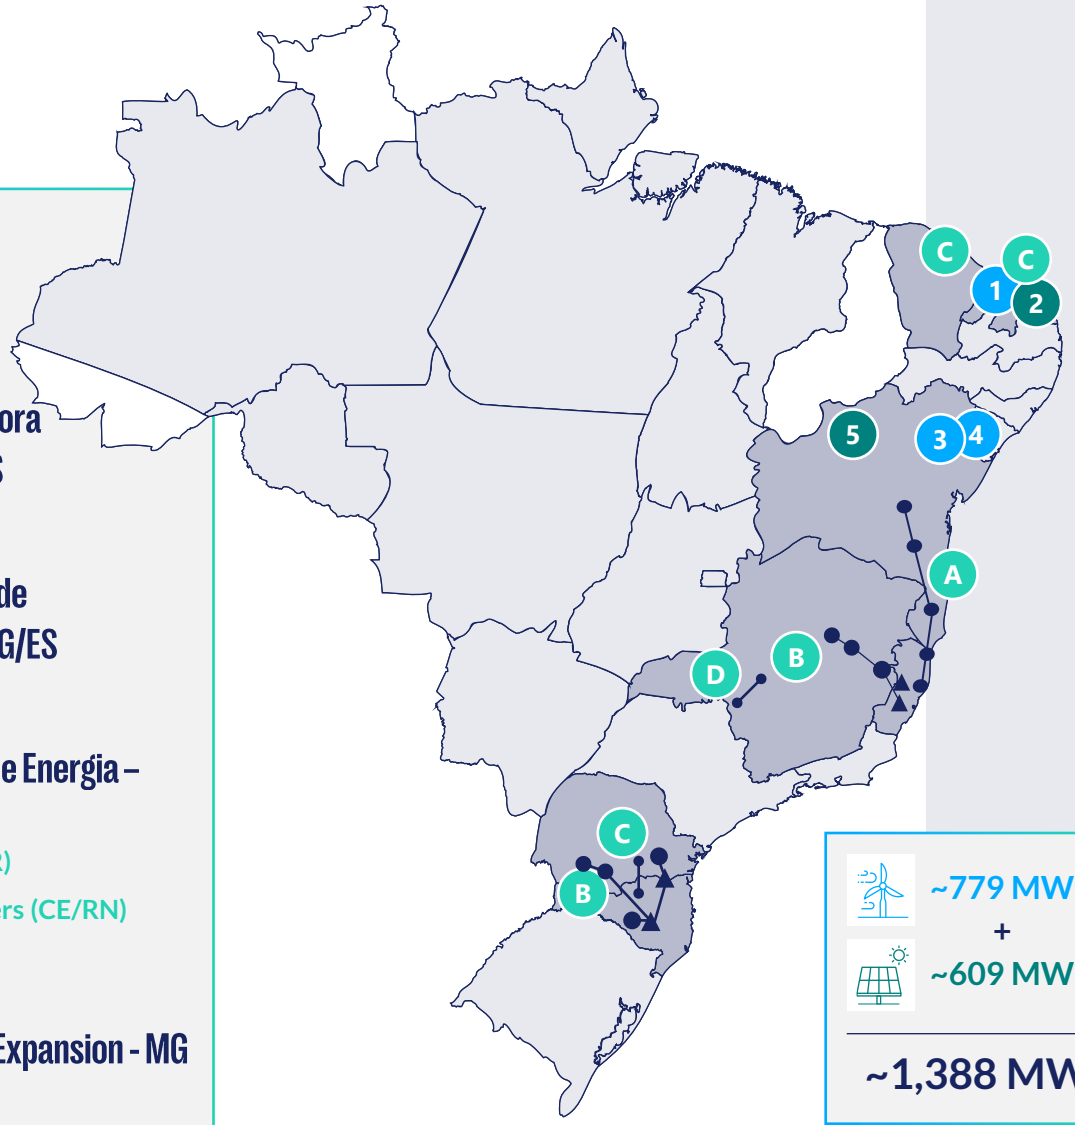

A Asa Branca Transmissora de Energia – BA/MG/ES
Length: ~1,000 Km

B Graúna Transmissora de Energia – SC/PR/SP/MG/ES
Length: ~738 Km

C Colibri Transmissora de Energia – SC/PR/CE/RN
Length: ~143 Km (SC/PR)
5 synchronous condensers (CE/RN)

Generation

D LRCAP – Jaguara HPP Expansion - MG
Capacity: +232 MW

~779 MW
+
~609 MW

~1,388 MW

Projects under development

1 Santo Agostinho Wind Complex (Phase II) – RN
Installed capacity: 279 MW

2 Santo Agostinho Photovoltaic Complex – RN
Installed capacity: ~509 MW

3 Umburanas Wind Complex (Phase II) – BA
Installed capacity: 250 MW

4 Campo Largo Wind Complex (Phase III) – BA
Installed capacity: 250 MW

5 Alvorada Photovoltaic Complex - BA
Installed capacity: ~100 MW

06.

FINANCIAL PERFORMANCE

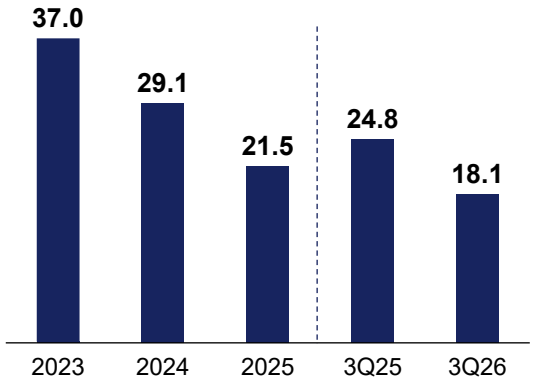

Resilient Financial Performance

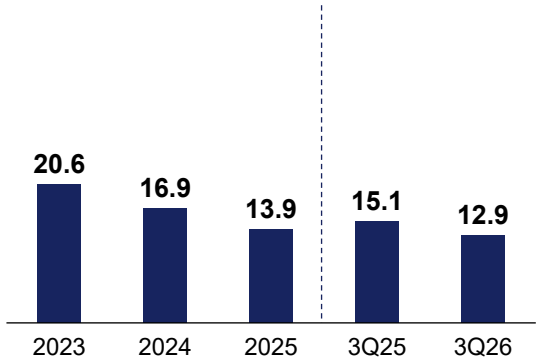

Good portfolio management and diversification into other regulated segments, such as transmission, natural gas transportation and energy contracts in the ACR, result in stability and predictability of results.

Recent Capex cycle linked to renewables and transmission expansion still not fully contributing to Ebitda.

| ROE[1] – Adjusted Return on Equity (%)

| ROIC[2] – Adjusted Return on Invested Capital (%)

Notes: ENGIE Brasil Energia internal study based on the Company's Financial Statements.
[1] ROE: adjusted net income of the past 4 quarters / shareholders' equity LTM.
[2] ROIC: effective tax rate x adjusted EBIT LTM/ invested capital LTM (invested capital: debt – cash and cash equivalents – deposits earmarked for debt servicing + SE).
[3] Nominal amount.

From 2016 – 2025[3]

Investments:
Amounted to
R$ 44.2 billion,
with **79% leverage**

Transmission:
3,205 km
under operation and
6 own substations

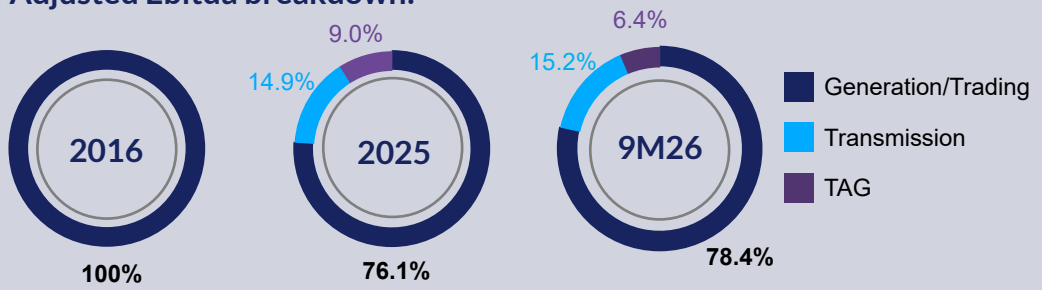

Proprietary installed capacity:

Total:
+52%

Renewable:
+79%

Value creation in the gas segment, through TAG

| Adjusted Ebitda breakdown:

Adjusted Ebitda:
+141%

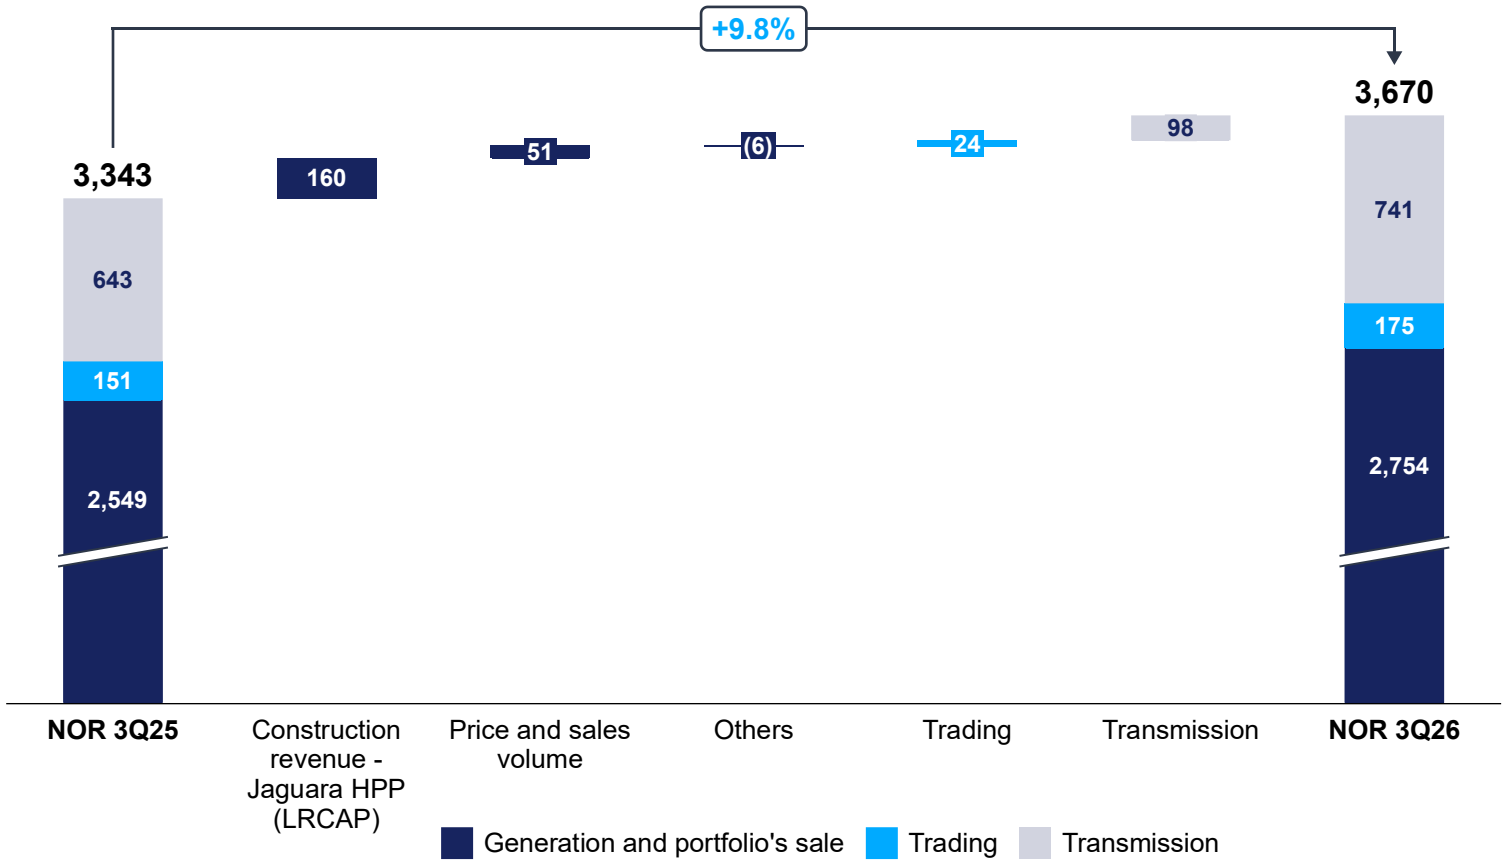

Dividends and Interest on Equity:
R$ 18.9 billion

Adjusted Net Income:
+74%

Net Operating Revenue Change

Net Operating Revenue (R$ million)

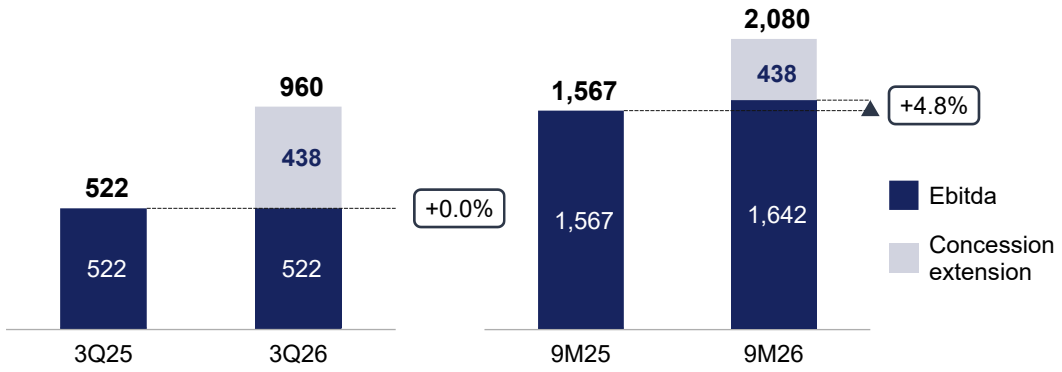

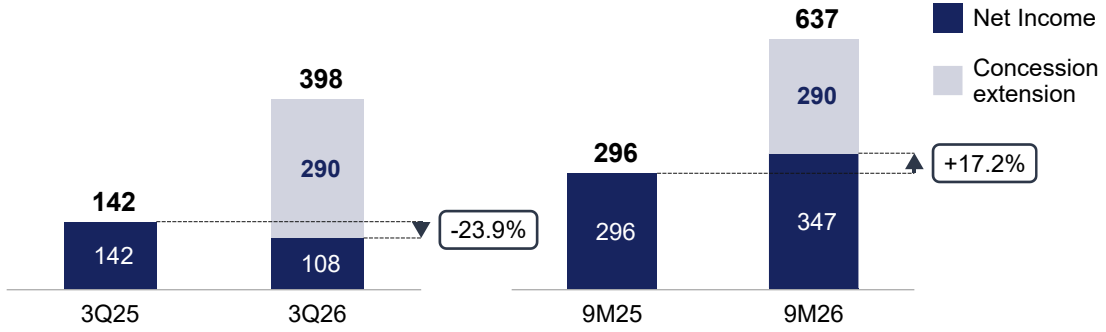

Result of Equity Income - Jirau Energia

Contribution of the Result from Jirau Energia to the Ebitda of the Company

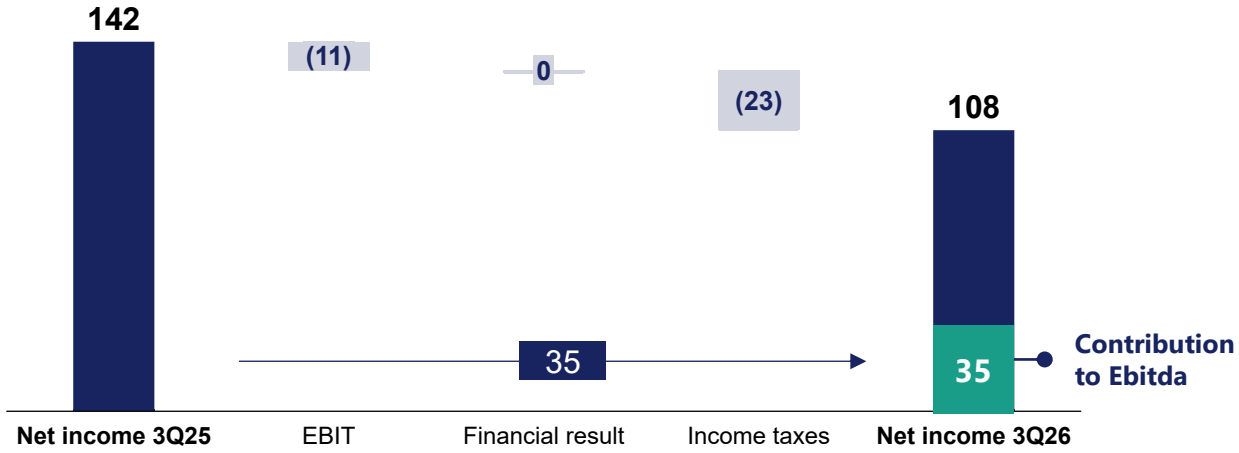

| Ebitda (R$ million) @100%

| Net income (R$ million) @100%

| Jirau Energia's Net Income Change (R$ million)

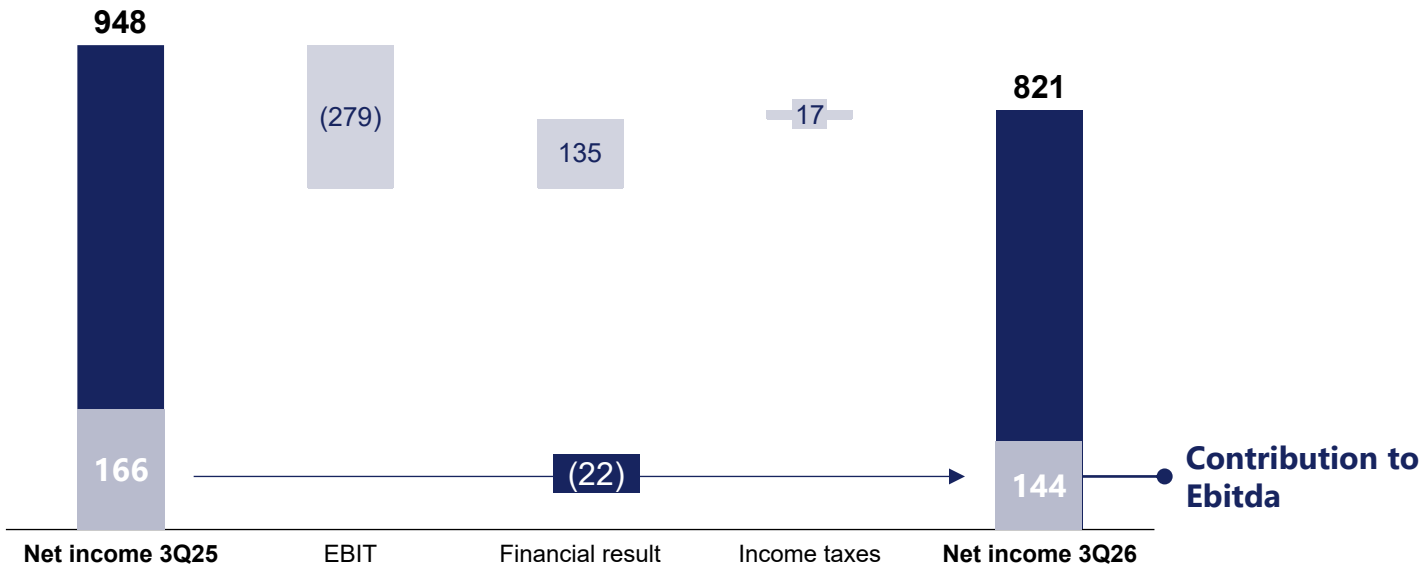

Stake of **40%** in Jirau Energia, resulting in the contribution of **R$ 35 million** through equity income to the Company's Ebitda in **3Q26**, as from July 17, 2026.

Result of Equity Income

Contribution of the Result from Transportadora Associada de Gás (TAG) to the Ebitda of the Company

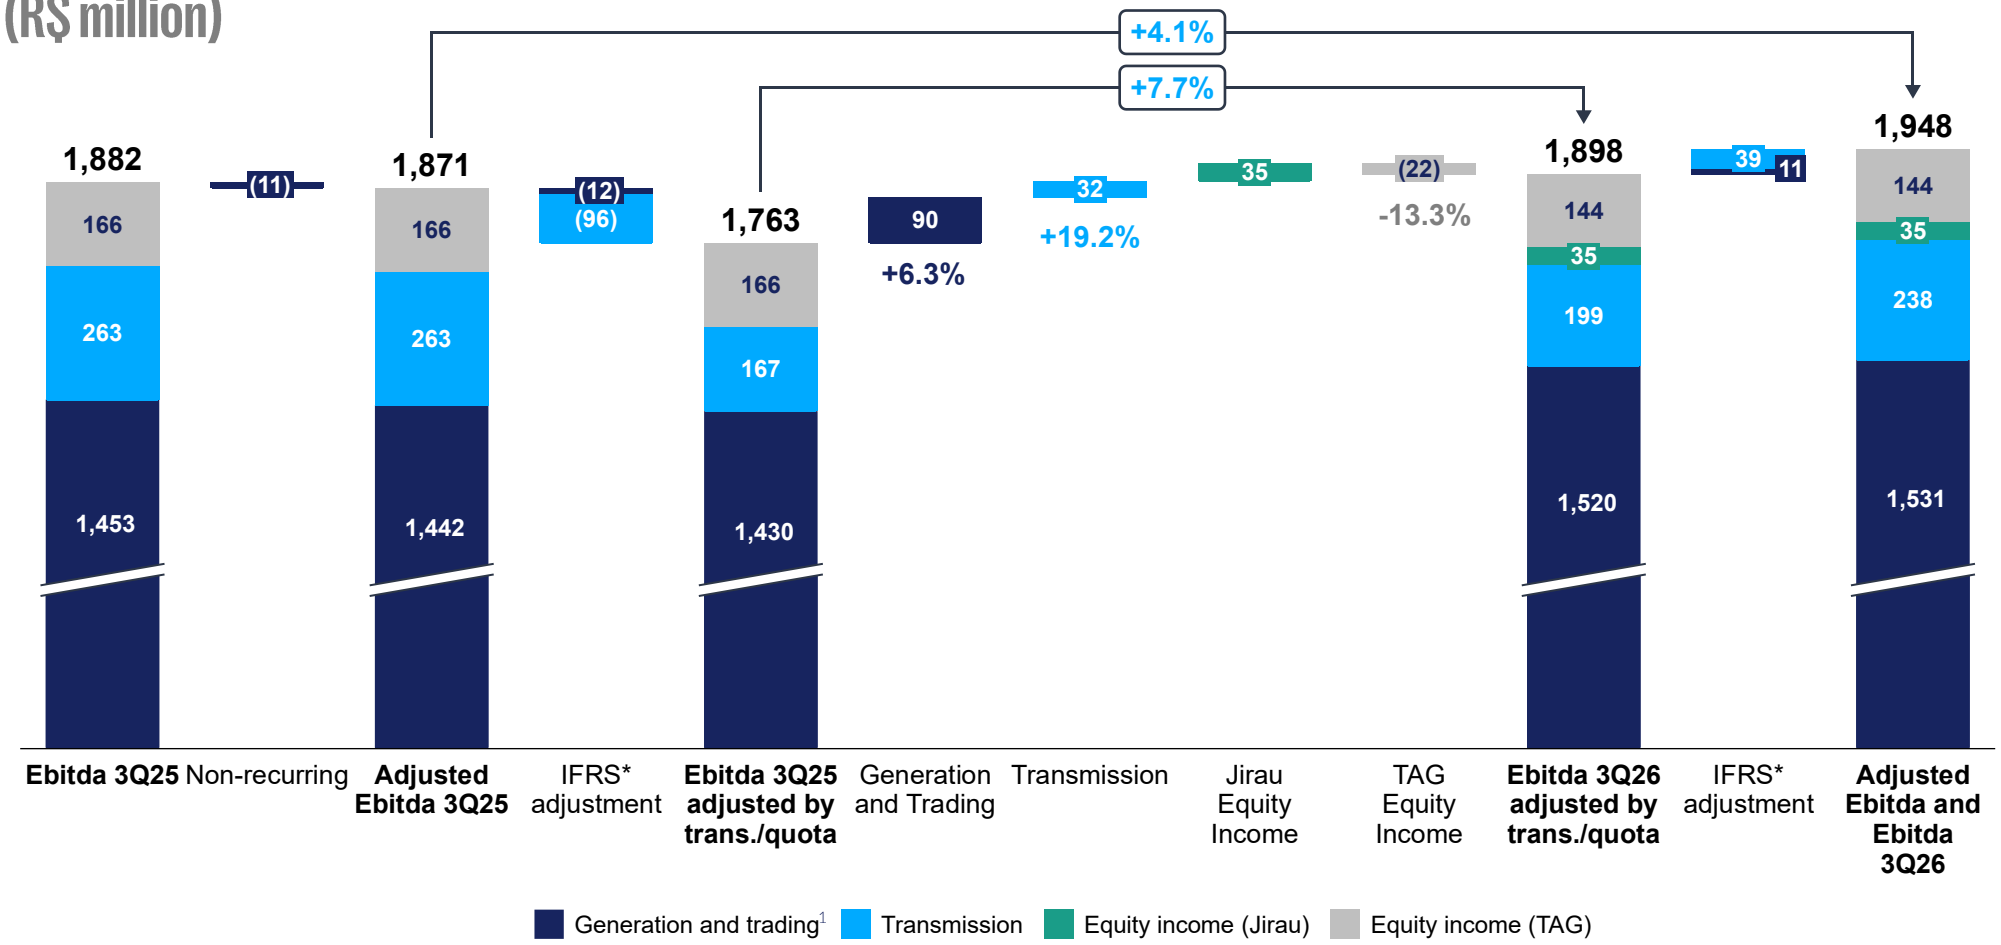

| TAG's Net Income Change (R$ million)

Stake of **17.5%** **in** TAG, resulting in the contribution of **R$ 144 million** through equity income to the Company's Ebitda in **3Q26**.

Ebitda Change

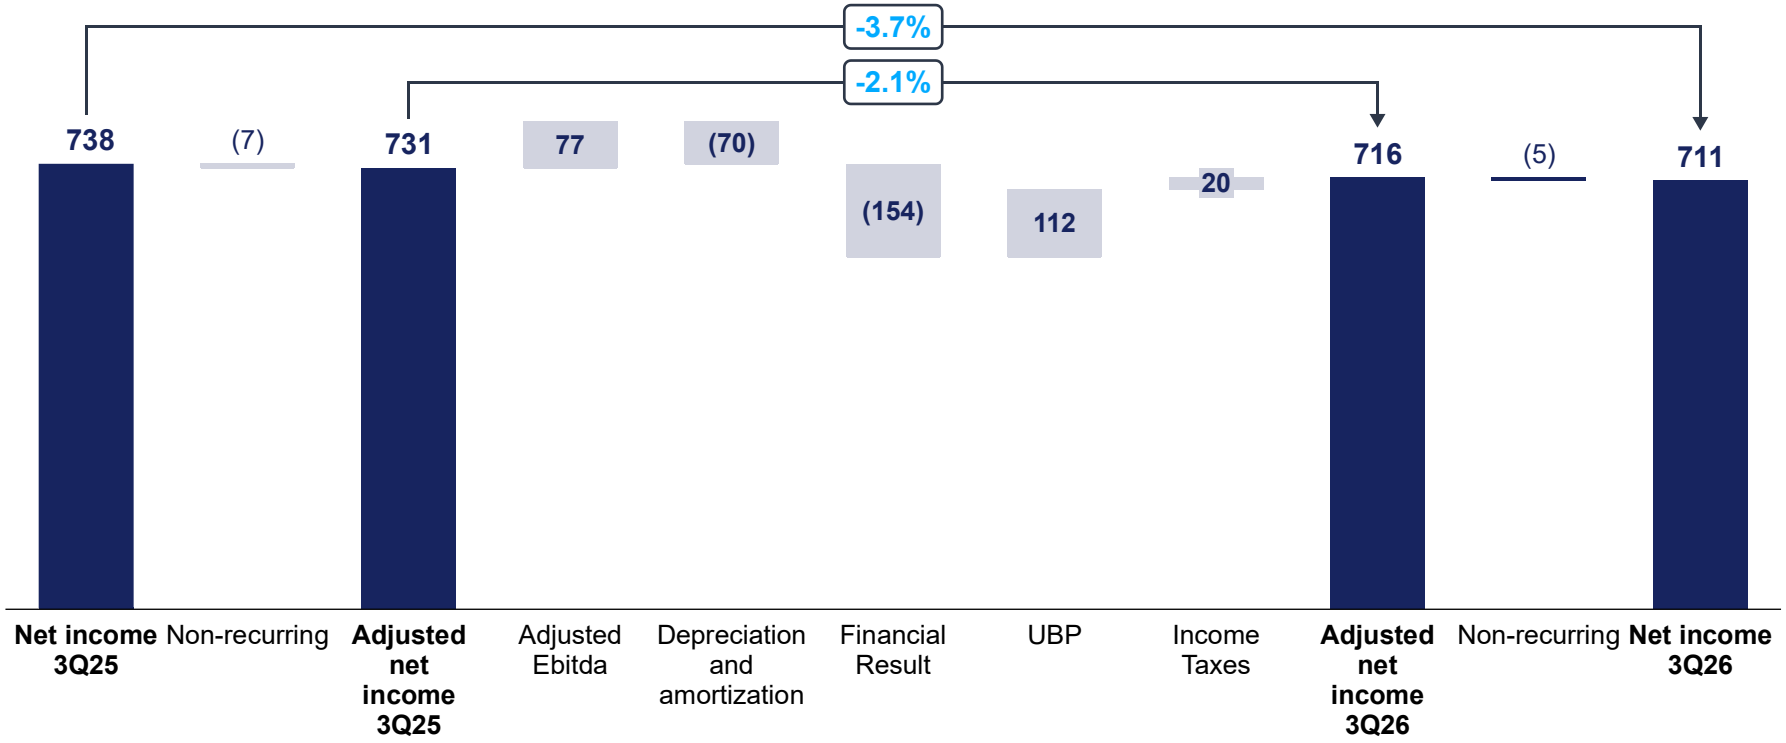

Ebitda (R$ million)

Notes:
[1] Considering the result from generation and trading segments.
*IFRS: International Financial Reporting Standards
Adjusted Ebitda: net income + income tax and social contribution + financial result + depreciation and amortization + non-recurring.

Net Income Change (R$ million)

Net Income (R$ million)

Balanced Debt

With no currency exposure

Debt control

+

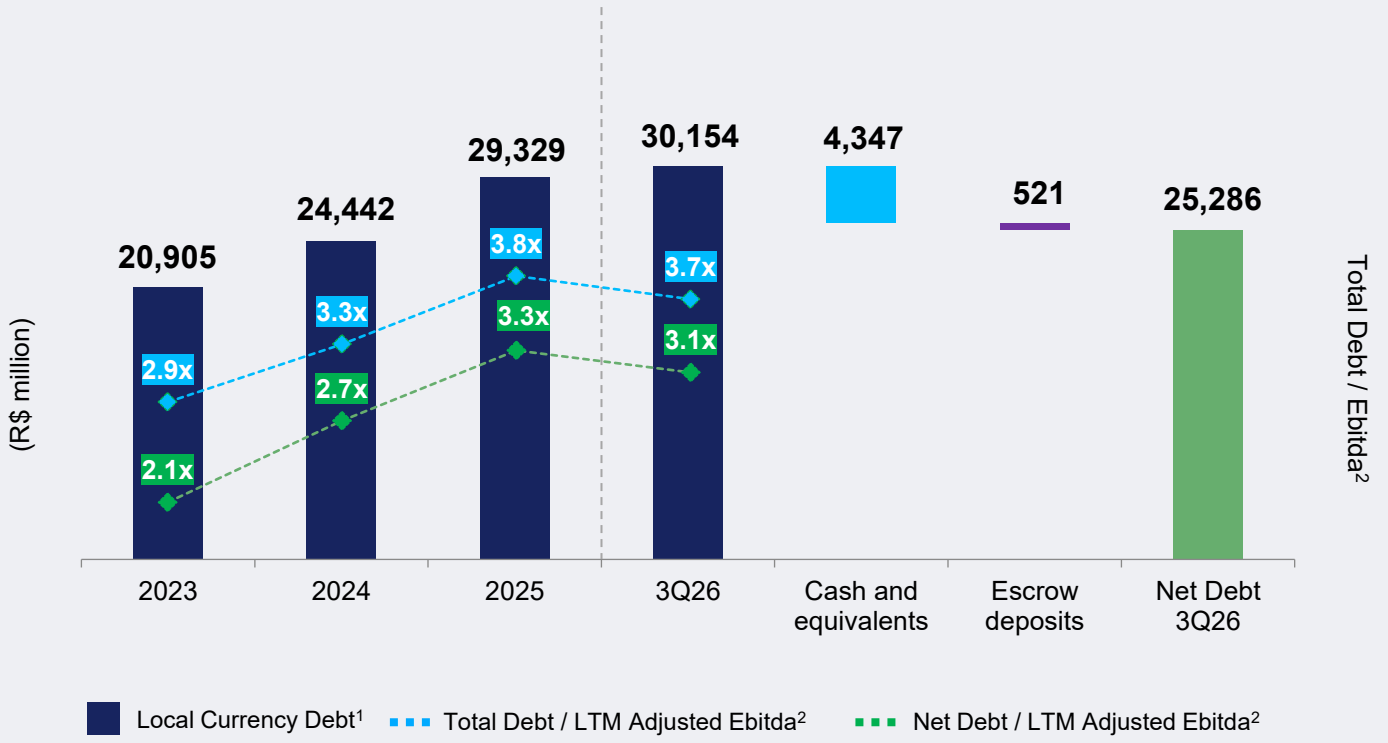

active management of **debt costs**

+

successful investment decisions

ensure balanced levels of the Net Debt/Ebitda ratio.

| Debt Overview (R$ million)

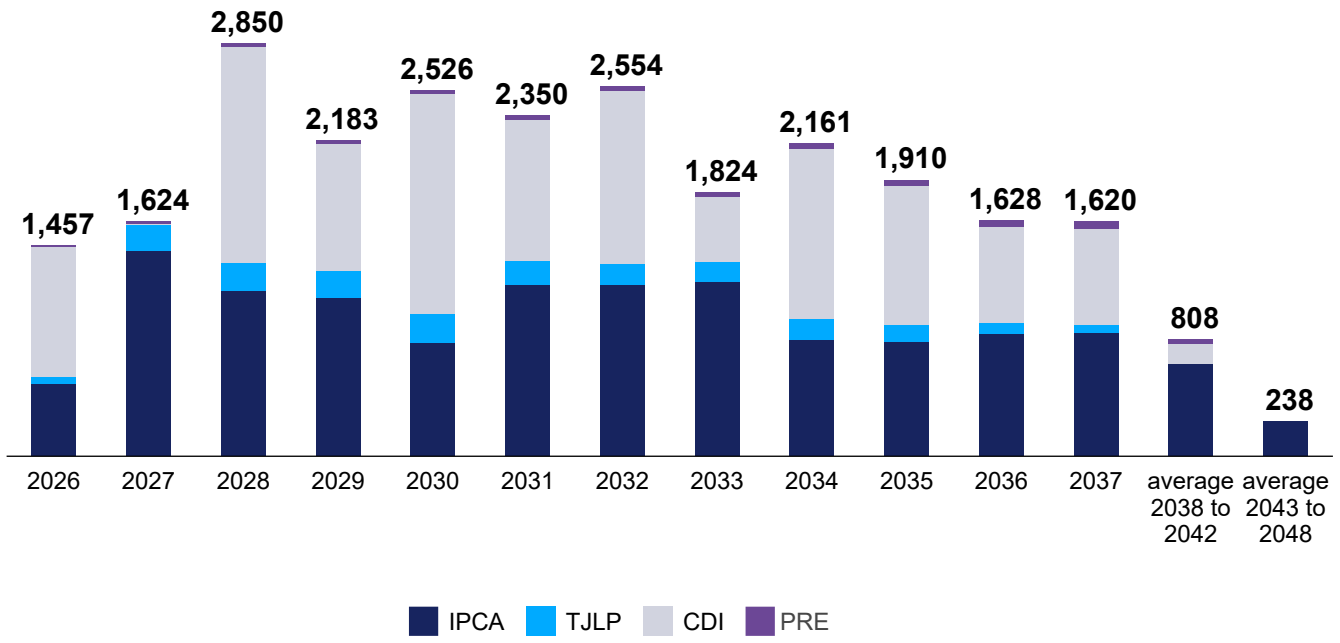

Notes:
[1] Gross debt, net of hedge operations.
[2] Adjusted Ebitda in the past 12 months.

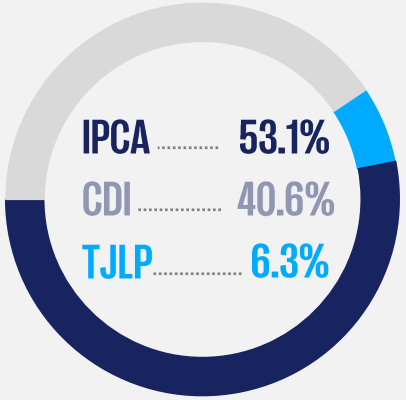

Debt Profile and Composition

AAA rating and robust cash generation translate into competitive costs of debt for financing growth

| Maturity Debt Schedule as from September 30, 2026 (R$ million)

Debt breakdown

3Q26: Nominal cost of debt:
11.1% p.a. (equivalent to IPCA + 6.2%)

Average debt term: 7.2 years

3Q25: 12.0% p.a. (equiv. to IPCA + 6.4%)

Indexation of energy sales contracts mitigates exposure of debt to IPCA and cash position mitigates part of CDI exposure.

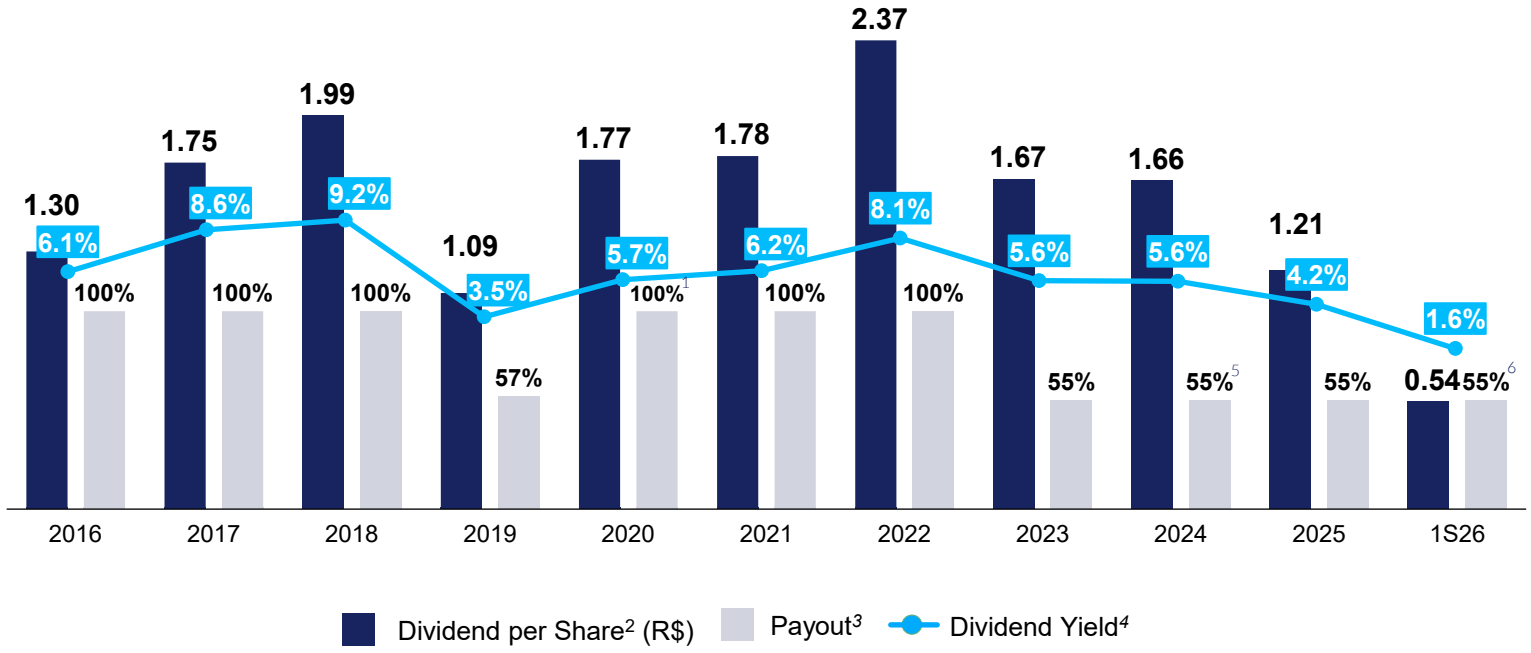

Dividend Policy

Bylaw minimum payout: 30% of distributable net income

Management Commitment: minimum payout of 55% of distributable net income

Frequency: biannual

Dividends (based on distributable net income)

Notes:
[1] Payout equivalent to 100% of the distributable adjusted net income (ex-hydrological risk negotiation).
[2] For the purposes of comparability between fiscal years, an adjustment in dividend per share was made in the light of the share bonus approved on December 7, 2018 and on November 5, 2025.
[3] Considers the annual adjusted net income.
[4] Based on volume-weighted closing price of ON shares in the period.
[5] Payout equivalent to 55% of the distributable net income (excluding gains on partial disposal of investments in TAG).
[6] Payout ratio equivalent to 55% of distributable net income (excluding the financial gain from the UBP renegotiation).

Competitive Advantages

Strategic Industry

- Defensive profile in times of crisis
- Projects with high bankability
- Diversification among segments in the power sector

Premium Rating

- Fitch Ratings rated the Company's Local Long-Term Rating as 'AAA(bra)' and in global scale "BB+", one notch above the Brazilian sovereign rating

High-Caliber Corporate Governance and Sustainability

- Diversified and qualified team
- First class controlling shareholder
- Component of B3's Novo Mercado and ISE (since its inception in 2005)

Stable Financial Performance

- Strong cash flow
- ROE and ROIC above sector median
- No FX exposure

Presence in the Energy Sector

- One of the largest private power producers in Brazil
- Market cap: R$ 41.7 billion as of September 30, 2026
- Controlled by ENGIE S.A., world leader in energy

Clear Commercial Strategy

- Heavily contracted in the next years
- Diversified portfolio between free and regulated customers
- Benefits from windows of opportunities

Cash Flow Predictability

- Inflation-indexed contracts
- Hydro based, with diversification on complementary sources and active portfolio management
- Long-term contracting strategy
- Transmission contracts not susceptible to volume variation

High Operational Perfomance

- Benchmark indexes of availability
- ISO 9001, 14001 and 45001 certified plants
- Use of advanced technology for remote operations and predictive maintenance

07.

SUPPORTING DATA

ESG Highlights and KPIs
Other attachments

ESG Highlights

ENGIE Purpose

To take action to accelerate the transition towards a **carbon neutral society**, through **reduced consumption** of energy and solutions which are **more sustainable.**

E Environment

- **100%** in renewable capacity
- **Climate Journey**
- **Nature Journey**
- Support to our **client's journey towards decarbonization**
- **+ 6.7 million** seedlings planted/donated
- **+ 2,600** headwater springs restored
- **3,000 km²** under Company's responsibility (**1,600 km²** only reservoirs area)

S Social

- **Corporate diversity, equity and inclusion** Programs.
- **100% of registered suppliers** analyzed according to socio-environmental and ethical criteria
- **7 Culture and Sustainability Centers** (and other 4 under construction / adjustments)
- **+ R$ 385 million** invested since 2008
- **+ 3.5 million** people impacted
- Coverage in **+200 municipalities**

G Governance

- **Member of the Novo Mercado**
- Governance based on **integrated management, risk management, ethics and integrity**
- **Integrity Program and Ethics Committee,** monitored by the Board of Directors
- **11 risk groups mapped and mitigated**, including information security and climate risk
- Board of Directors with **4 independent directors**

Non-financial objectives

ENGIE Group

Aspect	Result 2025	Objective 2030
Greenhouse Gas Emissions (GHC)	45 $MtCO_2e$	Reduce to a range between **26 and 36 MtCO2e** the total greenhouse gas emissions from the generation of the Group's electric energy - in 2019, this total was **80 MtCO2e** (goal certified by the Science Based Target – SBTi initiative).
Diversity	33.1%	Increase to a range between **40% and 60%,** women's participation in the management of the Group — in 2019, women occupied **24%** of all leadership positions.
Renewable Energy	50%	Increase to a range between **58% and 66%** the participation of renewable sources in the energy production capacity mix worldwide — against **28%** reported in 2019.
Supply chain	79% / 51%	By 2030, reach **100%** of the responsible purchasing index (excluding energy purchases); and to reach 100% of suppliers representing at least 50% of the carbon footprint of acquisitions (excluding energy) committed to a decarbonization trajectory shared with ENGIE.
Water	0.18 m^3/MWh	Achieve water consumption in relation to energy produced of **0.1 m^3/MWh**.

Climate Change

Working to accelerate the energy transition to a low-carbon system for more than a decade, in 2023 ENGIE Brasil Energia consolidated its **Climate Journey**, whose main objectives are:

Incorporate the **management of climate risks** and **opportunities into the business**;

Develop **decarbonization strategies** in line with the ENGIE Group's NetZero goal.

JORNADA PELO CLIMA

Main strategic drivers Climate Journey

- **Decarbonization** of assets portfolio;
- **Expansion** in renewable energy;
- Constant search for **carbon footprint reduction**;
- **Value chain** engagement (Scope 3 - customers and suppliers);
- Actions for **Environmental Conservation and Biodiversity**;
- **Compensation** of residual emissions.

Goals and commitments

- Reduce GGH **emissions intensity** (tCO_2e/MWh) by 30% until 2025 and 56% until 2030 ($0.034tCO_2/MWh$ in 2021);
- Expansion of **renewable energy capacity** in 3.8 GW by 2030;
- Engage 100% of major **Scope 3 most pollutants suppliers** to set science-based targets by 2030;
- Have 100% of assets covered by **climate adaptation plans** by 2030.

100%
of installed capacity from renewable sources

Climate Change

Since 2012, ENGIE Brasil Energia has been investing in **reducing its greenhouse gases (GHG)** and adapting practices and processes to **the energy transition scenario**.

- Carbon dioxide emissions are among the biggest drivers of **climate change**.
- **Transition to a low carbon economy** is considered the main business challenge of this decade.
- Aligning businesses with the path of limiting global warming demands an objective view of **risks and opportunities**.

2006

Registration of the first CDM/UNFCCC **Carbon Credit Project** (Lages Project)

2010

First **Inventory of Greenhouse Gases**

2012

First decarbonization **targets** of ENGIE Group

2014

Decommissioning of Alegrete Thermoelectric Plant (RS)

2015

Coal exit global **strategy**

2016

Decommissioning of the Charqueadas Thermoelectric Power Plant (RS)

3D Strategy (Decarbonization, Digitization and Decentralization)

2019

Sale of the Willian Arjona Thermoelectric Plant (MS)

Acquisition of TAG

Acquisition of the concession for the Novo Estado transmission line

2020

EBE registers the **10th carbon credits Project** in the Clean Development Mechanism (CDM)

2021

More than 1.2 GW of **installed wind power capacity**

Sale of the Jorge Lacerda Thermoelectric Plant (SC)

2022

Acceleration of the **Climate Journey**

First direct **report to CDP – Score B**

2023

Sale of the last coal-fired thermoelectric plant in Brazil: Pampa Sul TPP (RS)

100% renewable

CDP Climate Change 2023 **- Score "A"**

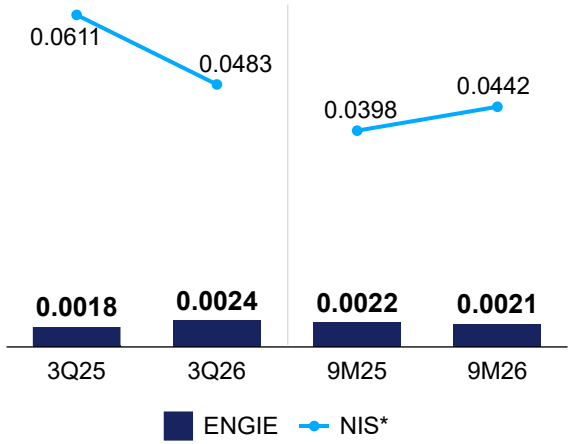

2024/ 2025

Increased focus on **supplier engagement** – Scope 3

CDP Climate Change 2025 **- Score "A"**

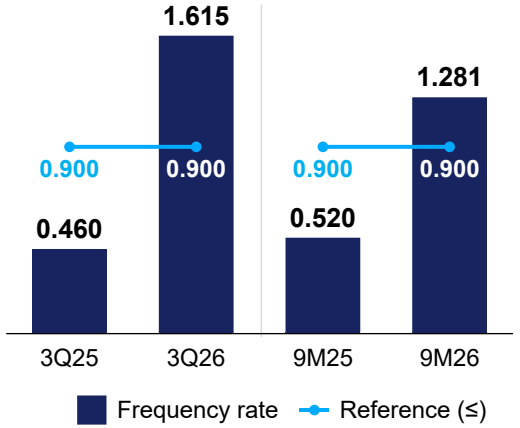

ESG KPIs

Emissions intensity[1] (tCO_2e/MWh)

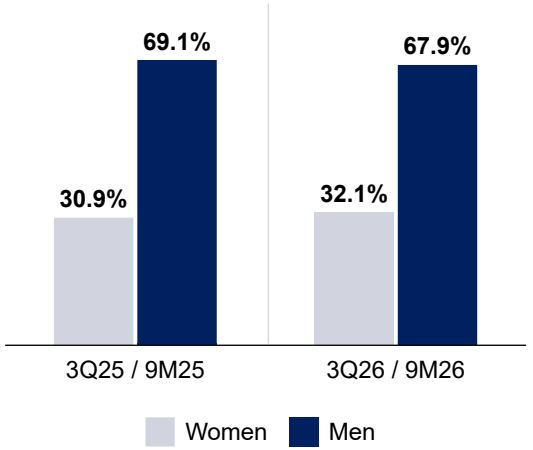

*Source: Ministry of Science, Technology and Innovation

Health and Safety – Frequency rate (own employees + service providers)*

Notes:

[1] Ebitda: net income + income tax and social contribution + financial result + depreciation and amortization.

[2] Adjusted Ebitda represents: net income + income tax and social contribution + financial result + depreciation and amortization + impairment + non-recurring.

[3] Adjusted Ebitda, less the effects of IFRS in the transmission segment and quota plants.

[4] ROE: adjusted net income of the past 4 quarters / shareholders' equity LTM.

[5] ROIC: effective tax rate x adjusted EBIT LTM/ invested capital LTM (invested capital: debt – cash and cash equivalents – deposits earmarked for debt servicing + SE).

[6] Adjusted amount, net of gains from hedge operations.

[7] Total electricity output from the plants operated by ENGIE Brasil Energia.

[8] Disregarding sales for quotas regime (Jaguara and Miranda HPPs).

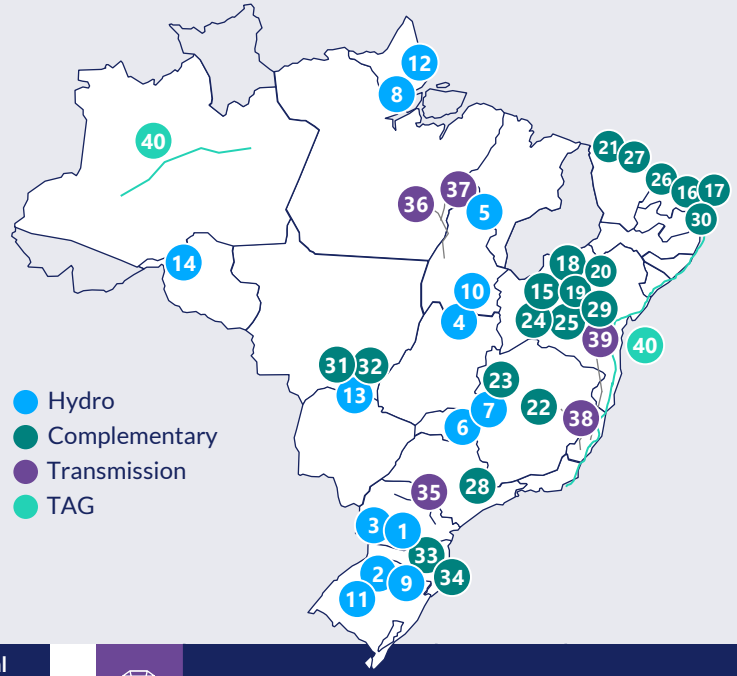

[9] Net of taxes, exports and trading operations.

[2] XXXX-YY-WWWW-ZZ, where:
XXXX -> year of auction
YY -> EN = existing energy or EN = new energy
WWWW -> year of delivery start
ZZ -> supply contract duration (in years)

[1] Average term weighted by the amount of energy sold, including trading operations.
[3] Sales price, including trading operations, net of ICMS and taxes over revenue (PIS/Cofins, R&D), i.e. future inflation is not being considered.
[4] Disregarding sales for quotas regime (Jaguara and Miranda HPPs).
[5] Purchase net price, considering trading operations and benefits from PIS/Cofins credits, i.e. future inflation is not being considered.

Notes:
- The balance refers to the settlement point (net of losses and internal consumption of the plants).
- The average prices are considered simply estimates and are based on financial planning revisions, not capturing volume changes, which are updated quarterly.

UBP Renegotiation (Use of Public Assets)

Value creation

On July 20th, the settlement of the renegotiated outstanding UBP payments related to the **Cana Brava** and **Ponte de Pedra hydropower** concessions was completed.

R$ 4.2 billion
Updated outstanding balance[1]

→

R$ 2.2 billion
Renegotiated balance settled[2]

→

Taxes: R$ 0.7 billion
Net Gain: R$ 1.3 billion

Hydropower Plant	Annual Payment (BRL thousand) as of Dec. 31, 2025	Maturity
Cana Brava	553,486	Sep. 30, 2033
Ponte de Pedra	219,710	Nov. 30, 2034
São Salvador	91,193	Apr. 30, 2037
Estreito	8,991	Apr. 27, 2040
Jari	3,120	Dec. 01, 2045
Cachoeira Caldeirão	1,357	Aug. 01, 2048

→ **R$ 773 million/year**
Payment settled

→ **R$ 105 million/year**
Payment maintained

Key milestones:

- ✓ April 16: Board of Directors approval
- ✓ April 30: Formal adherence
- ✓ June 8: Execution of the Amendment Agreement
- ✓ July 20: Financial settlement

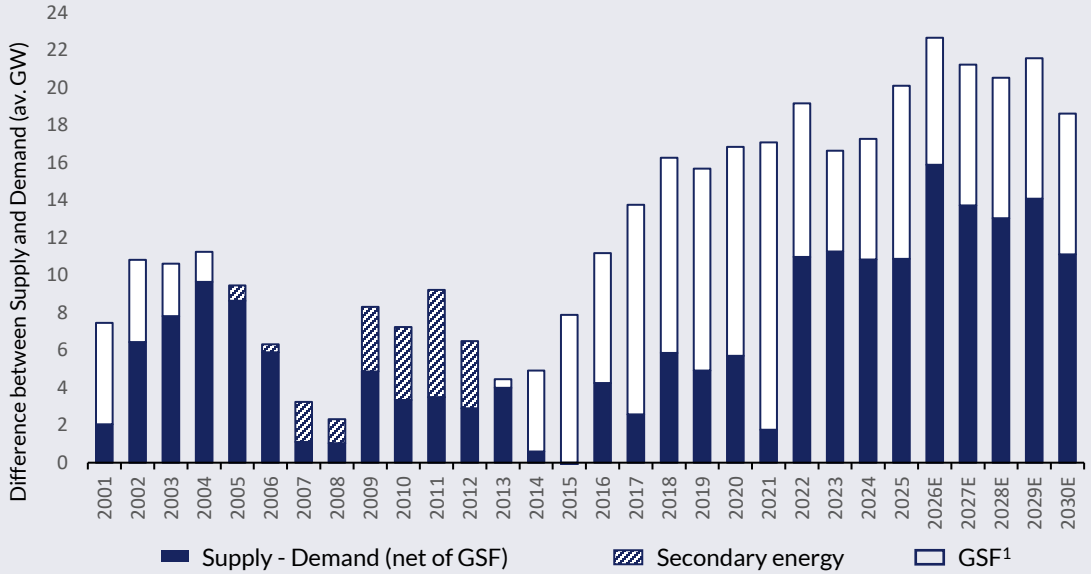

Notes:
[1] The December 2025 balance reflects the liability adjusted by the SELIC rate, less payments made during the period.
[2] The final payment was settled on July 16th, 2026 (UHPP) and July 20th, 2026 (UHCB).

Energy Market in Brazil

Supply: in the past, supplied by hydroelectric plants with reservoirs. Currently, a greater presence of thermoelectric and hydroelectric run-of-river plants. Continuous expansion of supply from intermittent sources, reducing the participation of other sources in the matrix.

Demand: the load in 3Q26 was 4.7% higher than in the same period of 2025. Over the last 12 months, electricity consumption increased by 3.3% in the residential sector and 2.8% in the commercial sector, while declining by 0.4% in the industrial sector, compared to the corresponding previous period.

Theoretical Supply x Demand

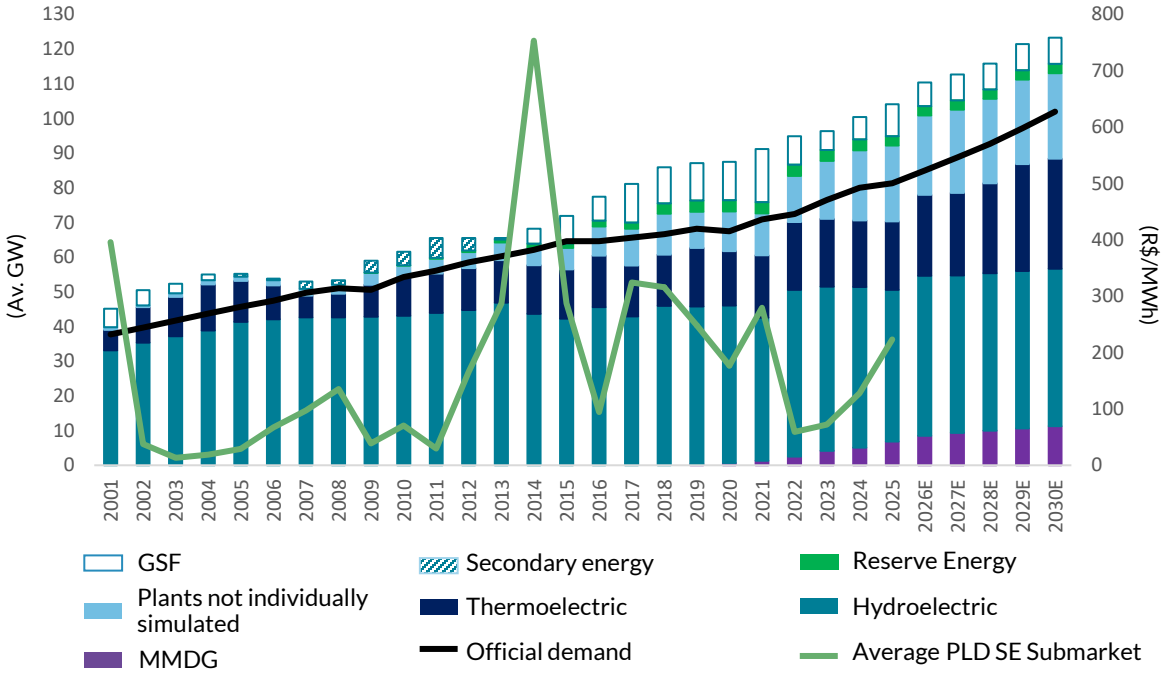

[1]: For 2026, the GSF expectation was considered according to CCEE.
For the years 2027+ the average GSF for the period 2020-2025 was used.

Source: ENGIE Brasil Energia internal study based on official sector documents.

3Q26 was marked by the historically strong intensification of the El Niño, which brought significant rainfall to the South and the southern portion of the Southeast region. Inflows reached 138% of the Long-Term Average (LTA) in the National Interconnected System (SIN), making it the seventh-best third quarter on record. The South region was the main highlight, with inflows at 239% of LTA, while the Southeast reached 111% of LTA, representing increases of 157 p.p. and 24 p.p., respectively, compared to the previous quarter. Conversely, the North and Northeast regions remained below average, with inflows at 60% and 64% of LTA, respectively. As a result, the quarter was characterized by a strong hydrological recovery in the South and Southeast, although inflows remained unevenly distributed across regions. Mild temperatures, together with wind and solar generation at typical levels, helped preserve reservoir storage in the Southeast, which ended the quarter at 56.5%, 6.5 p.p. higher than in the same period of the previous year.

Distribution of supply by source

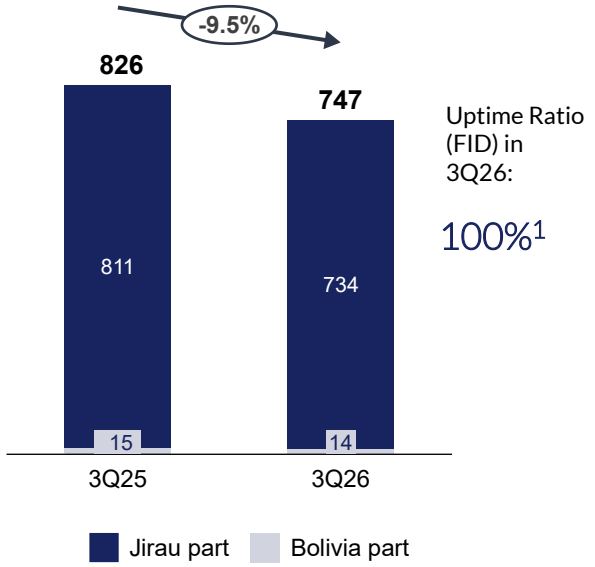

Source: Internal study based on Aneel and ONS data.

Jirau HPP: operating data

Hydropower asset with long-term contracted revenues
Concession term extended until 2047

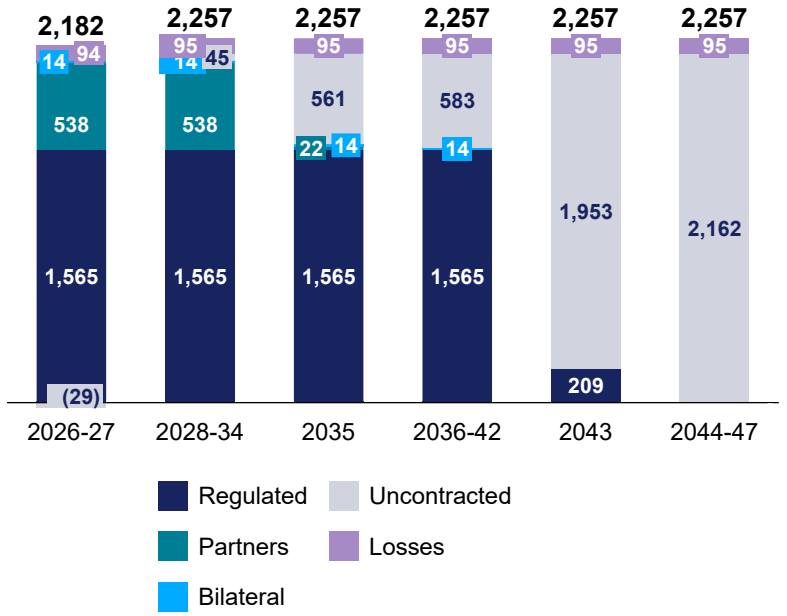

| Gross Generation (avg MW)

Uptime Ratio (FID) in 3Q26:

Installed Capacity:
3,750 MW

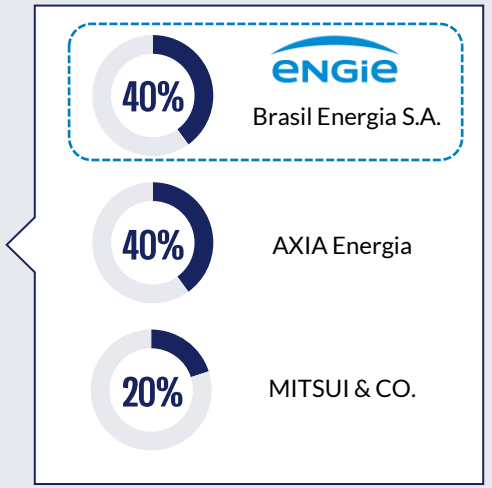

50 Generating Units

75 MW each GU

Physical Guarantee[2]:
2,182 aMW 90m expanded
2,257 aMW 90m constant

Shareholding Structure: as of July 17, 2026

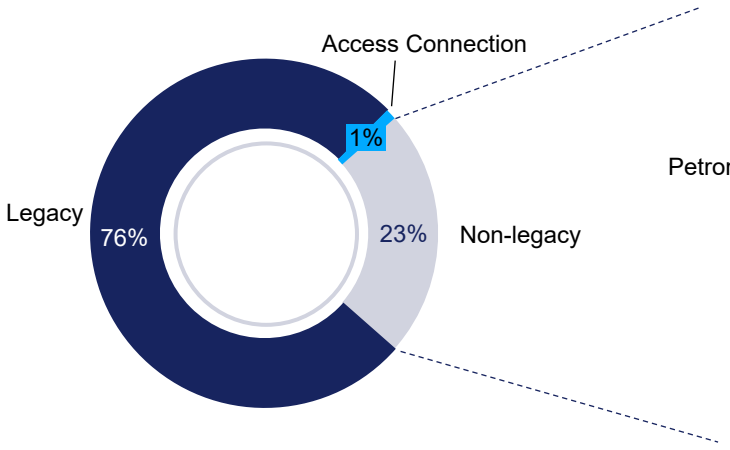

Notes:
[1] Subject to final settlement and accounting by the CCEE.
[2] MME Ordinance No. 2,946 established new firm energy certificate amounts for Jirau HPP of 2,222.6 aMW for operations at the expanded 90-meter level and 2,335.1 aMW for operations at the constant 90-meter level. Of the total increase, one-third is allocated to the Government of Bolivia. Accordingly, the share attributable to Brazil corresponds to 2,182.2 aMW (expanded level) and 2,257.2 aMW (constant level).
[3] Concession term extended until August 16, 2047, as approved by Aneel on July 14, 2026, pursuant to Homologatory Resolution No. 3,598.
